H. C. DuToit, A. G. W. Steyn, R. H. Stumpf, 2012-12-06 Portraying data graphically certainly contributes toward a clearer and more penetrative understanding of data and also makes sophisticated statistical data analyses more marketable This realization has emerged from many years of experience in teaching students in research and especially from engaging in statistical consulting work in a variety of subject fields Consequently we were somewhat surprised to discover that a comprehensive yet simple presentation of graphical exploratory techniques for the data analyst was not available Generally books on the subject were either too incomplete stopping at a histogram or pie chart or were too technical and specialized and not linked to readily available computer programs Many of these graphical techniques have furthermore only recently appeared in statistical journals and are thus

not easily accessible to the statistically unsophisticated data analyst. This book therefore attempts to give a sound overview of most of the well known and widely used methods of analyzing and portraying data graphically. Throughout the book the emphasis is on exploratory techniques. Realizing the futility of presenting these methods without the necessary computer programs to actually perform them, we endeavored to provide working computer programs in almost every case. Graphic representations are illustrated throughout by making use of real life data. Two such data sets are frequently used throughout the text. In realizing the aims set out above, we avoided intricate theoretical derivations and explanations, but we nevertheless are convinced that this book will be of inestimable value even to a trained statistician.

**Data Visualization in Exploratory Data Analysis** Yingsen Mao, 2016

Exploratory data analysis (EDA) refers to an iterative process through which analysts constantly ask questions and extract knowledge from data. EDA is becoming more and more important for modern data analysis such as business analytics and business intelligence as it greatly relaxes the statistical assumption required by its counterpart confirmation data analysis (CDA) and involves analysts directly in the data mining process. However, exploratory visual analysis as the central part of EDA requires heavy data manipulations and tedious visual specifications which might impede the EDA process if the analyst has no guidelines to follow. In this paper, we present a framework of visual data exploration in terms of the type of variable given, using the effectiveness and expressiveness rules of visual encoding design developed by Munzner [1] as guidelines in order to facilitate the EDA process. A classification problem of the Titanic data is also provided to demonstrate how the visual exploratory analysis facilitates the data mining process by increasing the accuracy rate of prediction. In addition, we classify prevailing data visualization technologies including the layered grammar of ggplot2 [2], the VizQL of Tableau [3], d3 [4], and Shiny [5] as grammar based and web based, and review their adaptability for EDA as EDA is discovery oriented and analysts must be able to quickly change both what they are viewing and how they are viewing the data.
