Ada Embedded Systems Testbed Project Nelson H. Welderman,Neal Altman,Mark Borger,Patrick Donohoe,William E. Hefley,CARNEGIE-MELLON UNIV PITTSBURGH PA SOFTWARE ENGINEERING INST.,1987 The purpose of the Software Engineering Institute s Ada Embedded Systems Testbed AEST Project is to investigate some of the critical issues in using Ada for real time embedded applications particularly the extent and quality of the runtime support facility provided by Ada implementations The project s objective has been to generate new information about using Ada in real time embedded systems This information is in the form of benchmark test results higher level experiment results and lessons learned in designing and implementing real time applications in Ada This technical report provides an overview of the results produced in the first year of the project through 30 September 1987 Details of these results are contained in other referenced technical reports The investigative approach of the AEST Project promotes three stages in evaluating real time

embedded systems benchmarking experimentation and prototyping and designing coding and testing an application The project testbed is designed to support the process of building embedded systems applications using various Ada environments and development tools In this way software engineers at the Software Engineering Institute can learn more about using Ada in real time embedded systems and can disseminate that information to the mission critical computer resource MCCR community KR [Resources in Ada](#) ,1990 **Advances in Instrumentation** ,1980 Proceedings of the ISA Conference and Exhibit *Government Reports Announcements & Index* ,1988 *A Review of Ada Tasking* Alan Burns,Andrew M.
