

Faraday's Law

Faraday's Law of Electromagnetic Induction states that a changing magnetic field induces an electric current in a conductor.

Discovered by Michael Faraday, this principle highlights the dynamic relationship between magnetism and electricity.

When the magnetic field around a conductor changes, it produces an electromotive force (EMF) that drives an electric current.

This phenomenon is fundamental to the operation of generators, transformers, and various electrical devices, playing a crucial role in the generation and transmission of electric power.
