## Exploring Curvature:

**Exploring Curvature** James Casey, 2012-12-06 one should not be too ready to erect a wall of separation between nature and the human mind d Alembert Dugas 1955 It is possible to present mathematics in a purely formal way that is to say without any reference to the physical world Indeed in the more advanced parts of abstract algebra and mathematical logic one can proceed only in this manner In other parts of mathematics especially in Euclidean geometry calculus differential equations and surface geometry intimate connections exist between the mathematical ideas and physical things In such cases a deeper and sometimes quicker understanding can be gained by taking advantage of these connections I am not of course suggesting that one should appeal to physical intuition whenever one gets stuck in a mathematical proof in proofs there is no substitute for rigor Rather the connections with physical reality should be made either to motivate mathematical assumptions or to introduce questions out of which theorems arise or to illustrate the results of an analysis Such interconnections are especially important in the teaching of mathematics to science and engineering students But mathematics students too have much to gain by familiarizing themselves with the interconnections between ideas and real things The present book explores the geometry of curves and surfaces in a physical way **The Best Writing on**
