From Object Modelling To Advanced Visual Communication Focus On Computer Graphics:

From Object Modelling to Advanced Visual Communication Sabine Coquillart, Wolfgang Straßer, Peter Stucki, 2012-12-06
This book is a collection of the best papers originally presented as state of the art reports or tutorials at the Eurographics 91 conference in Vienna. A choice has been made giving priority to timeless information. Another goal was to cover all aspects of computer graphics except hardware as completely as possible from modelling to advanced visualization and communication. The ten contributions by internationally renowned experts fulfil this goal perfectly. Some important problem areas treated from different viewpoints thus enhancing and deepening the reader's perspective.

Advanced Multimedia Content Processing Shojiro Nishio, Fumio Kishino, 1999-03-24
This volume is the Proceedings of the First International Conference on Advanced Multimedia Content Processing (AMCP 98). With the remarkable advances made in computer and communication hardware, software, and system technologies, we can now easily obtain large volumes of multimedia data through advanced computer networks and store and handle them in our own personal hardware. Sophisticated and integrated multimedia content processing technologies, which are essential to building a highly advanced information-based society, are attracting ever-increasing attention in various service areas including broadcasting, publishing, medical treatment, entertainment, and communications. The prime concerns of these technologies are how to acquire multimedia content data from the real world, how to automatically organize and store these obtained data in databases for sharing and reuse, and how to generate and create new attractive multimedia content using the stored data. This conference brings together researchers and practitioners from academia, industry, and public agencies to present and discuss recent advances in the acquisition, management, retrieval, creation, and utilization of large amounts of multimedia content. Artistic and innovative applications through the active use of multimedia content are also subjects of interest. The conference aims at covering the following particular areas:
1. Dynamic multimedia data modeling and intelligent structuring of content based on active bottom-up and self-organized strategies.
2. Access architecture, querying facilities, and distribution.
