Photographic Optics Sidney Ray, 2002-02-20 Selected by the American Library Association's Choice magazine as best technical book the first edition of this book soon established itself as the standard reference work on all aspects of photographic lenses and associated optical systems This is unsurprising as Sidney Ray provides a complete comprehensive reference source for anyone wanting information on photographic lenses from the student to the practitioner or specialist working with visual and digital media worldwide This third edition has been fully revised and expanded to include the rapid progress in the last decade in optical technology and advances in relevant electronic and digital forms of imaging Every chapter has been revised and expanded using new figures and photographs as appropriate as well as extended bibliographies New chapters include details of filters measurements from images and the optical systems of digital cameras Details of electronic and digital imaging have been integrated throughout More information is given on topics such as aspherics diffractive optics ED glasses image stabilization optical technology video projection and new types of lenses A selection of the contents includes chapters on optical theory aberrations auto focus lens testing depth of field development of photographic lenses general properties of lenses wide angle lenses telephoto lenses video lenses viewfinder systems camera movements projection systems and 3 D systems

Perception of Displayed Information Lucien Biberman, 2013-03-13 As this book took form its contents furnished the material for a graduate course at the University of Rhode Island Toward the end of that course the class reviewed the literature on display characteristics and design The universal criticism voiced in those reviews was that there was lots of hardware information but no criteria upon which one could base a sound design Though one could learn all about the size and brightness of various displays one could not form any judgment about how effectively the display transferred information to an observer As I reviewed our nearly completed text an announcement crossed my desk stating that one of the professional societies in a seminar was to consider if one should not attempt to formulate a theory concerning information transfer from displays to an observer That was the first title chosen for our book before our publisher told us that that was a paragraph not a title The group of contributors to this book have labored long in the conviction that there was a real need to develop and present a consolidated theory based upon the work of a number of pioneers including Barnes and Czerny de Vries Rose Coltman and Anderson Schade Johnson van Meeteren and others who established the various parts of a substantial theoretical and experimental background that seemed ripe for consolidation

Holographic Visions Sean Johnston, 2006-04-06 This is a history of how the new science of holography developed intellectually socially and culturally Based on interviews with pioneer holographers and archival research it shows how science technology art and wider culture are entwined in the modern world
