

Activity: An Introduction

Students demonstrate an understanding of compound probability through simple events based on the outcomes of two dice. Students will be using the principle of independence. The key to understanding this introduction activity is to guide the students to understand, intuitively, the concept of independent events. The typical misunderstanding is to have students focus only on the sum of the numbers that appear on the two dice, without thinking about possible outcomes. It may be helpful to have students understand the basic probability rule of independent events. For example, if the probability of rolling a 6 on a 6-sided die is $\frac{1}{6}$, and the probability of rolling a 6 on another 6-sided die is $\frac{1}{6}$, then the probability of rolling a 6 on both dice is $\frac{1}{6} \times \frac{1}{6} = \frac{1}{36}$. This is the same as saying that the probability of rolling a 6 on one die is $\frac{1}{6}$, and the probability of rolling a 6 on the other die is $\frac{1}{6}$, so the probability of rolling a 6 on both dice is $\frac{1}{6} \times \frac{1}{6} = \frac{1}{36}$.

Students will be using the following activity materials:

- Two dice
- Two sheets of paper
- Two sheets of graph paper

Activity 1: Introduction

1. Roll two dice. Record the sum of the numbers that appear on the two dice.
