## Event Horizon:

**Black Holes** Derek J. Raine, Edwin George Thomas, 2010 This introduction to the fascinating subject of black holes fills a significant gap in the literature which exists between popular non mathematical expositions and advanced textbooks at the research level It is designed for advanced undergraduates and first year postgraduates as a useful stepping stone to the advanced literature The book provides an accessible introduction to the exact solutions of Einstein s vacuum field equations describing spherical and axisymmetric rotating black holes The geometry and physical properties of these spacetimes are explored through the motion of particles and light The use of different coordinate systems maximal extensions and Penrose diagrams is explained The association of the surface area of a black hole with its entropy is discussed and it is shown that with the introduction of quantum mechanics black holes cease to be black and can radiate This result allows black holes to satisfy the laws of thermodynamics and thus be consistent with the rest of physics In this new edition the problems in each chapter have been revised and solutions are provided The text has been expanded to include new material on wormholes and clarify various other issues

**Unfolding Our Universe** Iain Nicolson, 1999-10-28 Unfolding Our Universe is a comprehensive and accessible introduction to astronomy With a clear crisp text and beautiful colour illustrations it takes readers to the heart of the Universe explaining the facts concepts methods and frontiers of astronomical science The book can be read right through without referring to any mathematics For the more ambitious reader key points are developed in more detail and basic mathematics provided in self contained boxes A unique feature of Unfolding Our Universe is the careful balance it strikes between the basics of the subject and its frontiers Step by step it carefully assembles a complete understanding of astronomy Full colour throughout and a very readable text make this book a delight for the casual reader to browse while the clear and concise explanations will appeal to amateur astronomers science teachers and college and university students seeking a no nonsense introduction to astronomy

[The Cosmos](#) Jay M. Pasachoff, Alex Filippenko, 2013-08-12 An exciting introduction to astronomy the fourth edition of this book uses recent discoveries and stunning photography to inspire non science majors about the Universe Written by two highly experienced and engaging instructors each chapter has been fully updated with more than 200 new images throughout including recent images from space missions and the world s best observatories The newly redesigned text is organized as a series of stories each presenting the history of the field the observations made and how they fit within the process of science our current understanding and what future observations are planned Math is provided in boxes and easily read around making the book suitable for courses taking either mathematical or qualitative approaches New discussion questions encourage students to think widely about astronomy and the role science plays in our everyday lives and podcasts for each chapter aid studying and comprehension

W. Gibbons, Stephen W. Hawking, 1993 The Euclidean approach to Quantum Gravity was initiated almost 15 years ago in an attempt to understand the difficulties raised by the spacetime singularities of classical general relativity which arise in the gravitational collapse of stars to form black holes and the entire universe in the Big Bang An important motivation was to develop an approach capable of dealing with the nonlinear non-perturbative aspects of quantum gravity due to topologically non-trivial spacetimes There are important links with a Riemannian geometry Since its inception the theory has been applied to a number of important physical problems including the thermodynamic properties of black holes quantum cosmology and the problem of the cosmological constant It is currently at the centre of a great deal of interest This is a collection of survey lectures and reprints of some important lectures on the Euclidean approach to quantum gravity in which one expresses the Feynman path integral as a sum over Riemannian metrics As well as papers on the basic formalism there are sections on Black Holes Quantum Cosmology Wormholes and Gravitational Instantons *New York, 1997* *6th Workshop on Parallel and Distributed Simulation (PADS92)* Marc Abrams, Paul Francis Reynolds, 1992 *Through the Event Horizon* Robert Montgomery, 2017-07-12 Legends are not born they are forged in the fires of determination and strength Stricken by the binds of mortality Ron embarks on his last great expedition A university professor is drawn to unearth the mysteries of what lies beneath to uncover the ill-fated destiny of the planet Gelomdor the creature sent to consume and devour all living things has been awoken Plagues swept across the lands and legions of the undead are at the wake as the World Eater begins to rise from the ashes Extracted by members of what's left of the US Military they embark to find a means to end the reign of tyranny of the Demon Dragon By the bending of Space Time the doorway to Angora opens and the changing of the written pages of fate begins *Event Horizon* Jack McKinney, 1991 **Astronomy** William J.
