Handbook of Research on P2P and Grid Systems for Service-Oriented Computing: Models, Methodologies and Applications Antonopoulos, Nick, Exarchakos, Georgios, Li, Maozhen, Liotta, Antonio, 2010-01-31 Addresses the need for peer to peer computing and grid paradigms in delivering efficient service oriented computing **Analytic Research**

Foundations for the Next-Generation Electric Grid National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Board on Mathematical Sciences and Their Applications, Committee on Analytical Research Foundations for the Next-Generation Electric Grid, 2016-04-15 Electricity is the lifeblood of modern society and for the vast majority of people that electricity is obtained from large interconnected power grids However the grid that was developed in the 20th century and the incremental improvements made since then including its underlying analytic foundations is no longer adequate to completely meet the needs of the 21st century The next generation electric grid must be more flexible and resilient While fossil fuels will have their place for decades to come the grid of the future will need to accommodate a wider mix of more intermittent generating sources such as wind and distributed solar photovoltaics Achieving this grid of the future will require effort on several fronts There is a need for continued shorter term engineering research and development building on the existing analytic foundations for the grid But there is also a need for more fundamental research to expand these analytic foundations Analytic Research Foundations for the Next Generation Electric Grid provide guidance on the longer term critical areas for research in mathematical and computational sciences that is needed for the next generation grid It offers recommendations that are designed to help direct future research as the grid evolves and to give the nation s research and development infrastructure the tools it needs to effectively develop test and use this research **Grid and Cloud Computing: Concepts, Methodologies, Tools and Applications** Management

Association, Information Resources, 2012-04-30 This reference presents a vital compendium of research detailing the latest case studies architectures frameworks methodologies and research on Grid and Cloud Computing **Parallel Programming, Models and Applications in Grid and P2P Systems** Fatos Xhafa, 2009-06-15 The demand for more computing power has been a constant trend in many fields of science engineering and business Now more than ever the need for more and more processing power is emerging in the resolution of complex problems from life sciences financial services drug discovery weather forecasting massive data processing for e science e commerce and e government etc Grid and P2P paradigms are based on the premise to deliver greater computing power at less cost thus enabling the solution of such complex problems **Parallel Programming Models and Applications in Grid and P2P Systems** presents recent advances for grid and P2P paradigms middleware programming models communication libraries as well as their application to the resolution of real life problems By approaching grid and P2P paradigms in an integrated and comprehensive way we believe that this book will serve as a reference for researchers and developers of the grid and P2P computing communities Important features of

the book include an up to date survey of grid and P2P programming models middleware and communication libraries new approaches for modeling and performance analysis in grid and P2P systems novel grid and P2P middleware as well as grid and P2P enabled applications for real life problems Academics scientists software developers and engineers interested in the grid and P2P paradigms will find the comprehensive coverage of this book useful for their academic research and development activity

An Experimental Framework for Executing Applications in Dynamic Grid Environments Eduardo Huedo,2002 The Grid opens up opportunities for resource starved scientists and engineers to harness highly distributed computing resources A number of Grid middleware projects are currently available to support the simultaneous exploitation of

heterogeneous resources distributed in different administrative domains However efficient job submission and management continue being far from accessible to ordinary scientists and engineers due to the dynamic and complex nature of the Grid This report describes a new Globus framework that allows an easier and more efficient execution of jobs in a submit and forget fashion Adaptation to dynamic Grid conditions is achieved by supporting automatic application migration following performance degradation better resource discovery requirement change owner decision or remote resource failure The report also includes experimental results of the behavior of our framework on the TRGP testbed *Mathematical Sciences Research Challenges for the Next-Generation Electric Grid* National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Board on Mathematical Sciences and Their Applications, Committee on Analytical Research Foundations for the Next-Generation Electric Grid, 2015-10-13 If the United States is to sustain its economic prosperity quality of life and global competitiveness it must continue to have an abundance of secure reliable and affordable energy resources There have been many improvements in the technology and capability of the electric grid over the past several decades Many of these advances to the grid depend on complex mathematical algorithms and techniques and as the complexity of the grid has increased the analytical demands have also increased The workshop summarized in this report was developed as part of an ongoing study of the Committee on Analytical Research Foundations for the Next Generation Electric Grid *Mathematical Sciences Research Challenges for the Next Generation Electric Grid* summarizes the presentations and discussions from this workshop This report identifies critical areas of mathematical and computational research that must be addressed for the next generation electric transmission and distribution system and to identify future needs and ways that current research efforts in these areas could be adjusted or augmented **IEEE International Geoscience and Remote Sensing Symposium Proceedings** ,2003 **Proceedings of the 2003 International Symposium on Collaborative Technologies and Systems** ,2002 **Illinois Competitive Energy Association V.
