

The Boeing 747-400 is a wide-body, four-engine jet airliner. It is the largest passenger aircraft in the world, with a maximum capacity of 416 passengers in a single-class configuration. The aircraft is designed for long-haul flights and is known for its reliability and efficiency.

The aircraft's design is based on the Boeing 747-300, but it features several key improvements. The most significant change is the addition of a fourth engine, which is mounted on the upper wing pylon. This allows the aircraft to carry more fuel and maintain a higher cruise altitude, resulting in improved fuel efficiency and reduced noise.

The Boeing 747-400 also features a new wing design, which includes a larger leading edge flap and a new wingtip device. These changes improve the aircraft's lift and drag characteristics, further enhancing its performance.

In terms of passenger capacity, the Boeing 747-400 offers a significant advantage over other large aircraft. With its four decks, it can accommodate a large number of passengers in a comfortable and spacious environment. The aircraft is also equipped with a variety of amenities, including entertainment systems, Wi-Fi, and premium cabin options.

The Boeing 747-400 has a proven track record of safe and reliable service. It has been used by airlines around the world for over 30 years, and it continues to be a popular choice for long-haul flights. The aircraft's large size and four engines make it well-suited for high-altitude, long-distance travel.

In conclusion, the Boeing 747-400 is a remarkable aircraft that combines size, efficiency, and passenger comfort. It is a true workhorse of the skies, and it continues to set the standard for large commercial airliners.
