Scientific Inquiry Cycle: Review

Science helps communities solve problems by applying knowledge and creating things that "solve" real-world issues such as water quality or waste management using science to make or improve solutions that have a positive impact. Understanding the problem fully, including its causes and effects, is the first step in finding an effective solution.

Designing solutions requires considering various constraints, such as budget, time, and safety concerns. Sometimes, important parts of a solution might be challenging, so it is important to weigh these trade-offs carefully. For example, creating materials for a house that are affordable to build and easy to use, cannot influence the effectiveness of the solution.

After identifying a solution, documenting how it works, what constraints affected it, and any compromises that have already been or should be made on the way. Communication, using digital media, and reflecting on the results of the solution are important steps. This process can help identify future needs, locally encourage responsible decision-making, and build community trust.

01. Mark the best answer for each question.

1. What is the first important step when working on how to solve a local problem?
 - a. Designing a solution
 - b. Spreading the most expensive materials
 - c. Spreading safety concerns
 - d. Understanding the problem fully
2. What does documenting constraints in a solution help with?
 - a. Finding the constraints of the solution
 - b. Evaluating the solution's cost and safety
 - c. Showing how to avoid constraints
 - d. Determining what the solution has no costs
3. Which is an example of a trade-off?
 - a. Finding a solution with no costs
 - b. Finding a solution with no safety
 - c. Finding a solution with no time
 - d. Using unsafe materials
4. Why is communication important?
 - a. To attract new team members
 - b. To make ideas clearer
 - c. To finish the problem by comparing
 - d. To avoid discussing the work

02. Mark if the statement is True (T) or False (F).

Identifying a solution helps in the scientific process by providing evidence from using the data.

Answer for each question.

Identifying a solution helps in the scientific process by providing evidence from using the data?

Why must this be considered in designing a solution?

What might happen when creating a solution that

helps improve scientific solutions in communities?

How can trade-offs be used in scientific understanding?
