

DESIGN ELEMENTS - 10 BASIC ELEMENTS

ELEMENTS OF DESIGN
quick reference sheet

LINE
Lines are fundamental to design. They are used to define shapes, create patterns, and establish a sense of movement and direction. Lines can be straight, curved, thick, or thin, and they can be used to create a variety of effects, from simple outlines to complex, abstract compositions.

SHAPE
Shapes are two-dimensional forms that are defined by lines or boundaries. They can be geometric (like squares, circles, and triangles) or organic (like leaves and clouds). Shapes are used to create visual interest and to define the form of objects and figures in a design.

VALUE
Value refers to the lightness or darkness of a color. It is a key element in creating depth and contrast in a design. A range of values from light to dark can be used to create a sense of volume and to draw the viewer's eye to specific areas of the composition.

COLOR
Color is one of the most powerful tools in design. It can evoke emotions, create a mood, and communicate a message. Understanding color theory and how colors interact with each other is essential for creating effective and visually appealing designs.

TEXTURE
Texture is the visual quality of a surface that is perceived through touch. It can be created through the use of patterns, lines, and colors. Texture adds depth and interest to a design, making it more engaging and tactile.

SIZE
Size refers to the relative dimensions of elements in a design. It is used to create a sense of hierarchy and to draw attention to important information. Larger elements are typically more prominent, while smaller elements are less noticeable.

SPACE
Space is the area around and between the elements of a design. It is used to create a sense of balance and to prevent the design from feeling cluttered. Proper use of space is essential for creating a clear and organized layout.
