

Chapter **29**

Ethics in educational research

Labby Ramrathan, Lesley le Grange and Lester Brian Shawa

Introduction

Research ethics have become a central issue in educational research and no research can be conducted without due regard to ethics. Regulatory frameworks and regulatory bodies have been established to manage and approve research ethics protocols. Hence, data gathering for an educational research project can only begin once ethical clearance has been sought, approved and a certificate of ethical clearance has been issued. For most research conducted in higher education, ethical clearance applications are managed and processed through dedicated structures within the institution.

Since research ethics are a central issue in educational research, this chapter will present an overview of the founding knowledge that informs ethical practices, the key issues that need to be considered in research ethics and the process of application for ethical clearance. This chapter will focus on the following:

- What is meant by research ethics?
- What are the key dilemmas in conducting educational research?
- What are some of the ethical issues in different approaches to research?
- What ethical considerations should be taken into account within a research project?

What are research ethics?

Ethics are closely associated with morals and involve embracing moral issues in the context of working with humans (Gregory, 2003). Ethics have now evolved to include issues beyond humans, incorporating a respect for and conservation of the environment. Ethics are also located within human rights and democracy discourses. With respect to the latter, society has become sensitive to the idea that the rights of people should be protected, particularly those who are vulnerable. The rights of South African citizens are, for example, enshrined in the Bill of Rights of the Constitution of the Republic of South Africa, 1996.
