Radiation Protection and Dosimetry Michael G. Stabin, 2007-09-12 This text is meant to serve as the basis for a two course series in the study of radiation protection and health physics The first course would be an introduction to and fast paced overview of the subject For some this is the only course in radiation protection that they will take and thus all material must be covered in a fairly superficial and rapid fashion The second course is a more in depth and applied study of radiation protection bringing in current materials from the literature a detailed study of regulations practice with real world dose and shielding calculations and perhaps application in a semester long student project assigned by the instructor Several chapters include an additional section of suggested readings and other resources that can be used by the instructor to build such detailed investigations in a second course of this nature In the first course the chapter may be basically studied with reference to the idea that a much richer literature base exists than can be covered in a broad overview of radiation protection Through exploration of this literature base and other similar materials that the instructor may be aware of that are not specifically cited this second more in depth course may be developed A routine part of any good health physics program is a complete course in radiation detection and measurement My brief overview chapter here cannot provide the depth needed for this subject
