

MAIN DIFFERENCES BETWEEN SIMULATED ANNEALING AND GENETIC ALGORITHMS

SEARCH SPACE

Simulated Annealing works well in continuous search spaces, where a range of values represents the solutions and many potential solutions. On the other hand, Genetic Algorithm is better suited for discrete search spaces, where a finite set of values represents the solutions, and there are fewer potential solutions.

EXPLORATION VS. EXPLOITATION

Simulated Annealing emphasizes exploration by randomly generating new solutions and exploring as much of the search space as possible. On the other hand, Genetic Algorithm emphasizes exploitation by selecting the best solutions and generating new solutions based on them.

CONVERGENCE RATE

Simulated Annealing converges more slowly but can avoid getting stuck in local optima. It does this by gradually reducing the temperature, which controls the probability of accepting new solutions. On the other hand, Genetic Algorithm converges faster but can get stuck in local optima.

SOLUTION QUALITY

Simulated Annealing can find the global optimum with a high probability. In contrast, Genetic algorithms can find good but only sometimes optimal solutions.
