Applications of Evolutionary Computing Mario Giacobini, Anthony Brabazon, Stefano Cagnoni, Aniko Ekart, Anna I. Esparcia-Alcázar, Muddassar Farooq, Andreas Fink, Penousal Machado, Jon McCormack, Michael O'Neill, Ferrante Neri, Mike Preuss, Franz Rothlauf, Ernesto Tarantino, Shengxiang Yang, 2009-04-11 The year 2009 celebrates the bicentenary of Darwin's birth and the 150th anniversary of the publication of his seminal work *On the Origin of Species*. If this makes 2009 a special year for the research community working in biology and evolution, the field of evolutionary computation (EC) also shares the same excitement. EC techniques are efficient nature-inspired planning and optimization methods based on the principles of natural evolution and genetics. Due to their efficiency and simple underlying principles, these methods can be used in the context of problem solving, optimization, and machine learning. A large and ever-increasing number of researchers and professionals make use of EC techniques in various application domains.

This volume presents a careful selection of relevant EC applications combined with a thorough examination of the techniques used in EC. The papers in the volume illustrate the current state of the art in the application of EC and can help and inspire researchers and professionals to develop efficient EC methods for design and problem solving.

Man-Machine Interactions 3 Dr. Aleksandra Gruca, Tadeusz Czachórski, Stanisław Kozielski, 2013-10-01 Man-Machine Interaction is an interdisciplinary field of research that covers many aspects of science focused on a human and machine in conjunction. Basic goal of the study is to improve and invent new ways of communication between users and computers and many different subjects are involved to reach the long-term research objective of an intuitive, natural, and multimodal way of interaction with machines. The rapid evolution of the methods by which humans interact with computers is observed nowadays, and new approaches allow using computing technologies to support people on the daily basis, making computers more usable and receptive to the user's needs. This monograph is the third edition in the series and presents important ideas, current trends, and innovations in the man-machine interactions area. The aim of this book is to introduce not only hardware and software interfacing concepts but also to give insights into the related theoretical background. Reader is provided with a compilation of high-quality original papers covering a wide scope of research topics, divided into eleven sections, namely: human-computer interactions, robot control, embedded and navigation systems, bio-data analysis and mining, biomedical signal processing, image and sound processing, decision support and expert systems, rough and fuzzy systems, pattern recognition, algorithms and optimization, computer networks and mobile technologies, and data management systems.

Advanced Methods and Technologies for Agent and Multi-Agent Systems D. Barbucha, M.T. Le, R.J. Howlett, 2013-05-14 The field of agent and

Agent-Based Evolutionary Search Ruhul A. Sarker, Tapabrata Ray, 2010-07-12 Agent based evolutionary search is an emerging paradigm in computational intelligence offering the potential to conceptualize and solve a variety of complex problems such as currency trading production planning disaster response management business process management etc There has been a significant growth in the number of publications related to the development and applications of agent based systems in recent years which has prompted special issues of journals and dedicated sessions in premier conferences The notion of an agent with its ability to sense learn and act autonomously allows the development of a plethora of efficient algorithms to deal with complex problems This notion of an agent differs significantly from a restrictive definition of a solution in an evolutionary algorithm and opens up the possibility to model and capture emergent behavior of complex systems through a natural age oriented decomposition of the problem space While this flexibility of representation offered by agent based systems is widely acknowledged they need to be designed for specific purposes capturing the right level of details and description This edited volume is aimed to provide the readers with a brief background of agent based evolutionary search recent developments and studies dealing with various levels of information abstraction and applications of agent based evolutionary systems There are 12 peer reviewed chapters in this book authored by distinguished researchers who have shared their experience and findings spanning across a wide range of applications

Random-Like Multiple Objective Decision Making Jiuping Xu, Liming Yao, 2011-03-25 What are the random like phenomena that can be found everywhere in real life world When carrying out a random sampling survey on the traffic situation we often obtain some descriptive results such as approximately expedite a little crowded and so on therefore the average level should be regarded as the random fuzzy phenomenon which is one of the random like phenomena Decision makers usually need to make the decision for these

problems with random like phenomena Which model should be constructed for them How should we handle these models to find the optimal strategy How can we apply these models to solve real life problems with random like phenomena In order to answer these questions this book provides an up to date methodology system 5MRP for random like multiple objective decision making which includes problem system with random like phenomena model system with random like coefficients research system with random like uncertain methods Some practical applications are also provided to illustrate the effectiveness of the proposed methodology system Researchers practitioners and students in systems science economics mathematics information engineering and MS OR will get a lot of useful references from this research monograph

Reasoning in Event-Based Distributed Systems Sven Helmer, Alexandra Poulouvasilis, Fatos Xhafa, 2011-06-17 With the rapid expansion of the Internet over the last 20 years event based distributed systems are playing an increasingly important role in a broad range of application domains including enterprise management environmental monitoring information dissemination finance pervasive systems autonomic computing collaborative working and learning and geo spatial systems Many different architectures languages and technologies are being used for implementing event based distributed systems and much of the development has been undertaken independently by different communities However a common factor is an ever increasing complexity Users and developers expect that such systems are able not only to handle large volumes of simple events but also to detect complex patterns of events that may be spatially distributed and may span significant periods of time Intelligent and logic based approaches provide sound foundations for addressing many of the research challenges faced and this book covers a broad range of recent advances contributed by leading experts in the field It presents a comprehensive view of reasoning in event based distributed systems bringing together reviews of the state of the art new research contributions and an extensive set of references It will serve as a valuable resource for students faculty and researchers as well as industry practitioners responsible for new systems development

Genetic Programming and Data Structures William B. Langdon, 2012-12-06 Computers that program themselves has long been an aim of computer scientists Recently genetic programming GP has started to show its promise by automatically evolving programs Indeed in a small number of problems GP has evolved programs whose performance is similar to or even slightly better than that of programs written by people The main thrust of GP has been to automatically create functions While these can be of great use they contain no memory and relatively little work has addressed automatic creation of program code including stored data This issue is the main focus of *Genetic Programming and Data Structures Genetic Programming Data Structures Automatic Programming* This book is motivated by the observation from software engineering that data abstraction e.g via abstract data types is essential in programs created by human programmers This book shows that abstract data types can be similarly beneficial to the automatic production of programs using GP *Genetic Programming and Data Structures Genetic Programming Data Structures Automatic Programming* shows how abstract data types stacks queues and lists can be evolved

using genetic programming demonstrates how GP can evolve general programs which solve the nested brackets problem recognises a Dyck context free language and implements a simple four function calculator In these cases an appropriate data structure is beneficial compared to simple indexed memory This book also includes a survey of GP with a critical review of experiments with evolving memory and reports investigations of real world electrical network maintenance scheduling problems that demonstrate that Genetic Algorithms can find low cost viable solutions to such problems Genetic Programming and Data Structures Genetic Programming Data Structures Automatic Programming should be of direct interest to computer scientists doing research on genetic programming genetic algorithms data structures and artificial intelligence In addition this book will be of interest to practitioners working in all of these areas and to those interested in automatic programming
