**The Genetics of Obesity** Claude Bouchard, 1994-03-28 This book provides a comprehensive compilation of the evidence available regarding the role of genetic differences in the etiology of human obesities and their health and metabolic implications It also identifies the most promising research areas methods and strategies for use in future efforts to understand the genetic basis of obesities and their consequences on human health Leading researchers in their respective fields present contributed chapters on such topics as etiology and the prevalence of obesities nongenetic determinants of obesity and fat topography and animal models and molecular biological technology used to delineate the genetic basis of human obesities A major portion of the book is devoted to human genetic research and clinical observations encompassing adoption studies twin studies family studies single gene effects temporal trends and etiology heterogeneity energy intake and food preference energy expenditure and susceptibility to metabolic derangements in the obese state Future directions of research in the field are covered in the book as well

*Genetics of Obesity Syndromes* Philip R. Beales, I. Sadaf Farooqi, Stephen O'Rahilly, 2008-08-29 Obesity is one of the most important contributing factors to disease throughout the world and is an area of great current interest among researchers and clinicians The genetics of common obesity is complex and an important thread through this labyrinth is the study of genetic syndromes in which obesity is a major component By examining the genetic mechanisms of obesity in these syndromes the authors will shed new light on the genetics of common obesity This is the first book on this important and exciting new area and addresses both the molecular and clinical features of the obesity syndromes providing hard core information for researchers and practical guidelines for clinicians caring for obese patients The book is divided into three sections the first covers approaches for assessing and investigating the obese individual the second describes nondysmorphic monogenic forms of obesity and the third documents key multisystem obesity syndromes with various genetic etiologies It is as much a reference book as it is a manual and will appeal to clinical geneticists obesity researchers endocrinologists nutritionists and medical biologists

mutations predisposing individuals to monogenic endocrine diseases have been discovered and with the advent of next generation sequencing a huge amount of new data has become available Further novel molecular mechanisms such as genomic imprinting have been implicated in the pathogenesis of endocrine diseases A better understanding of the genetic background of these diseases is relevant not only from the research perspective but also in terms of clinical care As such this book is an essential read for both researchers and clinicians working in the field

**Adipose Tissue and Adipokines in Health and Disease** Giamila Fantuzzi, Theodore Mazzone, 2007-11-06 The aim of Adipose Tissue and Adipokines in Health and Disease is to provide comprehensive information regarding adipose tissue its physiological functions and its role in disease This volume contains a collection of information spanning the entire range of adipose tissue studies from basic anatomical and physiological research to epidemiology and clinical aspects in one place This book is indispensable for basic researchers and clinicians interested in the fields of obesity metabolic diseases inflammation and immunity and specialists in each of the pathologies associated with obesity

**Genetics in Endocrinology** John D. Baxter, Shlomo Melmed, Maria I. New, 2002 An extensive body of evidence highlights the crucial importance of endocrine genetics Examples range from human growth disorders and obesity to cancers of the prostate and breast A pivotal part of the Modern Endocrinology Series this book presents major biological studies underlining the significance of data obtained from knock out mice as well as from transgenic animals Gene therapy and laboratory evaluation and screening of genetic endocrine diseases are covered as are many of the classical endocrine diseases

**Obesities** Jean Vague, 1998 Looks at the origin and development as well as the treatment of obesities Other topics covered by the book include ontogenesis of the fat mass in man the lipid cycle regulation of the fat mass and clinical features of obesities

*Nutrition in the Prevention and Treatment of Disease* Ann M. Coulston, Carol J. Boushey, 2008-03-28 This reference addresses basic principles and concepts that are central to the major clinical nutrition related activities such as nutritional assessment and monitoring current theoretical base and knowledge of efficacious interventions interactions between genetic and nutritional factors and the use and interpretation of population based or clinical epidemiological evidence **Cancer Prevention and Management through Exercise and Weight Control** Anne McTiernan, 2016-04-19 it is increasingly clear that cancer is also a disease of inertia In this book a broadly multidisciplinary group presents the evidence and provides the recommendations The antidote to diseases of inertia is movement let s move John Potter M D Ph D from the Foreword The American Cancer Society estimates that a third of all cancer deaths could be prevented through avoidance of obesity and the rejection of sedentary lifestyles The World Health Organization also supports this claim Additionally these and other organizations now recognize the role that activity can play in improving the quality of life for cancer patients *Cancer Prevention and Management through Exercise and Weight Control* provides us with the support necessary to make a call to action It brings together the contributions of world class researchers to lay out the evidence and a plan of attack for coping with this crisis The text begins by focusing on the research methods used in assessing the complex associations between activity energy balance and risk and prognosis In comprehensive literature reviews the authors consider the role of physical activity in the incidence of individual cancers then explore the mechanisms that might explain this connection They continue with a look at the relation between weight and cancer incidence including a consideration of genetics Research is also provided linking physical activity and weight control to a cancer patient s quality of life and prognosis The work concludes with ideas on how a plan of action might be implemented at the individual clinical and public health levels It also provides guidance on incorporating exercise and diet recommendations into clinical oncology practice *Progress in Obesity Research: 8* Bernard Guy-Grand, 1999 *The Genetics of Obesity* David Bradley Allison, Myles S. Kety, 1983 **Genetics of Obesity in Hong Kong Chinese** Rong Rong, 2017-01-26 This dissertation *Genetics of Obesity in Hong Kong Chinese a Candidate Gene Approach Focusing on the Melanocortin 4 Receptor and Adiponectin* by Rong Rong was obtained from The University of Hong Kong Pokfulam Hong Kong and is being sold pursuant to Creative Commons Attribution 3 0 Hong Kong License The content of this dissertation has not been altered in any way We have altered the formatting in order to facilitate the ease of printing and reading of the dissertation All rights not granted by the above license are retained by the author Abstract Abstract of thesis entitled *Genetics of Obesity in Hong Kong Chinese A Candidate Gene Approach Focusing on the Melanocortin 4 Receptor and Adiponectin* Submitted by RONG RONG for the degree of Doctor of Philosophy at the University of Hong Kong in June 2005 Various genes have been implicated in the pathogenesis of obesity Melanocortin 4 receptor MC4R has been shown to play a key role in energy homeostasis MC4R deficiency has been shown to account for 1 6% of early onset human obesity

Adiponectin also plays an important role in energy glucose and lipid homeostasis Single nucleotide polymorphisms SNPs and haplotypes of adiponectin gene have been reported to be associated with BMI insulin glucose and adiponectin levels in several ethnic populations However no systematic study has been conducted for these two candidate genes in Chinese The aim of the present study was to explore the contribution of the MC4R and adiponectin genes to obesity in Chinese 2 For the MC4R gene 227 obese subjects with a mean BMI of 35.29 kg/m<sup>2</sup> and 100 normal controls with a mean BMI of 21.57 kg/m<sup>2</sup> were screened for mutations in the putative promoter region and coding region by PCR direct sequencing Apart from two known SNPs V103I and 176A C 3 novel missense mutations Y35C C40R and M218T were also identified The prevalence of carriers of V103I in normal controls was significantly higher than that in obese subjects in keeping with findings in other ethnic groups C40R and M218T were only detected in obese but not in normal subjects All three novel MC4R missense mutations were functionally normal in terms of cAMP accumulation and cell surface expression suggesting that they probably did not contribute significantly to obesity in the mutation carriers For the adiponectin gene firstly a 4.6 kb fragment of the adiponectin gene was sequenced for SNPs in 30 obese and 30 normal subjects 15 SNPs including 12140G A 11426A G 11377C G 11156insCA 11043C T 10677C T 4041A C 3971A G 45T G 276G T 349A G 639T C 712A G 967G A 2019del insA with 4 novel ones SNPs 12140G A 10677C T 639T C and 967G A were identified Secondly a case control study including 226 obese and 207 normal subjects was conducted to examine the contribution of SNPs 11377 45 276 349 639 712 and 967 to obesity However the allelic frequency of the aforementioned SNPs was similar in 226 obese and 207 normal subjects In subjects with normal weight homozygous 45 GG and 45 276 GG GG had high insulin levels and insulin resistance index compared to those with other genotypes or haplotypes suggesting the contribution of SNPs and haplotype of adiponectin gene to obesity related traits However we could not detect a correlation of adiponectin levels with SNPs or haplotypes implying the limited contribution of adiponectin gene SNPs and haplotypes to adiponectin concentrations in Chinese In summary 2 SNPs and 3 novel missense mutations of MC4R were identified The frequency of MC4R mutations C40R and M218T was 0.8% in our population The functional properties of the 3 novel missense mutations were characterized Fifteen SNPs of the adiponectin gene 4 being novel were identified The association of homozygous 45 GG and homozygous 45 276 GG GG haplotype with two obesity related traits hyperinsulinemia and insu
