N. Roberts, Robert Sutton, Robert Allen, 2003 This volume contains forty papers from the 1st IFAC Workshop on Guidance and Control of Underwater Vehicles The aim of the Workshop was to bring together academic practitioners and industrialists involved in this important and expanding area of interest in order to exchange experiences on recent advances in this field Topics covered by the papers in this proceeding include UUV Control Applications System Identification UUV Architectures Navigation Modelling Fault Detection and Reconfiguration Contributors from Italy Ireland Japan Portugal Spain Turkey USA and the United Kingdom were represented at the workshop The Workshop was voted a resounding success by all delegates and in the light of this vote of confidence the Technical Committee on Marine Systems is planning to run this event again in 2005 with the slightly amended title of Navigation Guidance and Control of Underwater Vehicles Guidance, Control and Docking for CubeSat-based Active Debris Removal Mohamed Khalil Ben-Larbi, 2023-08-07 While a paradigm shift in space industry has already started involving mass production of higher standardized large distributed systems such as constellations there are no effective solutions existing for the mass removal of satellites Many indicators point to a further increase in the space traffic in Earth orbit in the near future which could imply new dynamics in the evolution of the space debris environment Even in case of diligent compliance with the Inter Agency Space Debris Coordination Committee IADC mitigation guidelines the growth in space traffic complicates its management and drastically increases the probability of accidents and system failures NASA scientist Donald J Kessler proposed a scenario in which the density of objects in low Earth orbit is high enough that collisions between objects could cause a cascade that renders space unusable for many generations Therefore a reliable and affordable capability of removing or servicing non functional objects is essential to guarantee sustainable access to Earth orbit Recently the CubeSat design standard introduced a new class of cost efficient small spacecraft and thereby offers a potential solution to the active debris removal ADR problem The development of a novel CubeSat compatible ADR technology has significant advantages

such as the use of commercial off the shelf parts reduced launch cost and reduced design efforts This thesis presents in the frame of an ADR mission an approach to advanced rendezvous and docking with non cooperative targets via CubeSat It covers the design process of simulation systems used for verification purposes the ideation and implementation of novel guidance control and docking techniques as well as their verification and evaluation The outcome of this research is a series of validated software tools processes technical devices and algorithms for automated approach and docking that have been tested in simulation and with prototype hardware

*Planning and Decision Making for Aerial Robots* Yasmina Bestaoui Sebbane,2014-01-10 This book provides an introduction to the emerging field of planning and decision making for aerial robots An aerial robot is the ultimate form of Unmanned Aerial Vehicle an aircraft endowed with built in intelligence requiring no direct human control and able to perform a specific task It must be able to fly within a partially structured environment to react and adapt to changing environmental conditions and to accommodate for the uncertainty that exists in the physical world An aerial robot can be termed as a physical agent that exists and flies in the real 3D world can sense its environment and act on it to achieve specific goals So throughout this book an aerial robot will also be termed as an agent Fundamental problems in aerial robotics include the tasks of spatial motion spatial sensing and spatial reasoning Reasoning in complex environments represents a difficult problem The issues specific to spatial reasoning are planning and decision making Planning deals with the trajectory algorithmic development based on the available information while decision making determines priorities and evaluates potential environmental uncertainties The issues specific to planning and decision making for aerial robots in their environment are examined in this book and categorized as follows motion planning deterministic decision making decision making under uncertainty and finally multi robot planning A variety of techniques are presented in this book and a number of relevant case studies are examined The topics considered in this book are multidisciplinary in nature and lie at the intersection of Robotics Control Theory Operational Research and Artificial Intelligence
