Scientific Inquiry Cycle: Review

Science helps us understand and solve problems by applying knowledge and creating things that help us live better. Each step in solving a problem is important. Using science to solve or improve problems can have a positive impact. Understanding the problem fully, including its causes and effects, is the first step in finding an effective solution.

Designing solutions requires considering various constraints, such as budget, time, and safety concerns. Sometimes, important parts of a solution might be challenging, so it's important to break the problem into smaller parts. For students, creating solutions for a problem that they affect in real and safe ways can influence the effectiveness of the solution.

After identifying a solution, documenting how it works, what constraints affected it, and any compromises that have already been and should be made on the idea. Communication, using simple words, and reflecting on the results of the solution are important steps. This process helps the student become more confident, responsible, decision-making, and team communication skills.

6A. Mark the best answer for each question.

1. What is the first important step when working on a problem to solve a local problem?
- Thinking of a solution immediately
 - Using the most expensive materials
 - Ignoring safety concerns
 - Understanding the problem fully
2. What does documenting constraints in a solution help with?
- Ignoring the constraints of the solution
 - Establishing a budget for the solution and safety
 - Breaking the task into smaller parts
 - Determining what the solution has to solve
3. Which is an example of a constraint?
- Working without any tools
 - Understanding how to finish the project
 - Using simple materials
 - Having access to resources
4. Why is it important to document constraints?
- To avoid not being in compliance
 - To make the solution better
 - To finish the problem as quickly as possible
 - To avoid overlooking safety

6B. Mark if the statement is True (T) or False (F).

1. A solution made after one failed attempt is always better than the first one.

Answer for each question.

1. Document a problem fully before designing a solution?

2. Why must this be considered in designing a solution?

3. Break it down if the problem is too big to solve?

4. How can you improve scientific solutions in your community?

5. Why are safety concerns important in scientific problem-solving?
