## INTRODUCTION

**Background.** The data in this handbook were compiled by the Air Force Combat Climatology Center (AFCCC) at the request of the Air Force Civil Engineer Support Agency (HQ AFCESA). Sites were identified by AFCESA, US Army Corps of Engineers (USACE), and the Naval Facilities Engineering Command (NAVFACENGCOCM). Final site selection was based upon availability of climatological data. Most sites are located at military installations supporting airfield operations or at local airports/airfields.

The information in Engineering Weather Data (EWD) is organized by location. The data for each location is contained in an 18-page Adobe PDF document. The following sections describe each of the products contained in EWD. The page number refers to its location in the document.

### CLIMATE SUMMARY (page 1)

**Location Information.** This section contains a summary table which includes site name, location, elevation (above mean sea level), World Meteorological Organization (WMO) number, period of record (POR), and average (atmospheric) pressure not corrected to sea level (higher elevations result in lower pressures). The WMO number is a unique number assigned to every location in the world that takes and transmits regular weather observations. The POR is the time frame over which the data used to compute the statistics in this handbook was compiled.

**Design Values.** Design values are provided for dry-bulb temperature, wet-bulb temperature, and humidity ratio at specific percentile frequencies of occurrence. The old EWD summer design values of 1, 2.5, and 5 percent were based on the warmest four months of the year. In the United States this was standardized as June through September. The new design values of 0.4, 1, and 2 percent are based on the entire year. The old winter design values of 99 and 97.5 percent were based on the three coldest months of the year (December through February). The new winter design values of 97.5, 99.6 and 99
