Young,2012-12-06 The ocean has entranced mankind for as long as we have gazed upon it traversed it dived into it and studied it It remains ever changing and seemingly never changing Each wave that progresses through the immediate surf zone on every coast is strikingly different yet the waves come again and again as if never to end The seasons come with essential regularity and yet each is individual whatever did happen to that year of the normal rainfall or tidal behavior This fascination with the currents of the ocean has always had a most immediate practical aspect shipping transportation commerce and war have depended upon our knowledge when we had it and floundered on our surprising ignorance more often than we wish to reflect These important practical issues have commanded attention from commercial academic and military research scientists and engineers from the earliest era of organized scientific investigation The matter of direct and insistent investigation was from the outset the behavior of ocean currents with long time scales namely those varying on annual or at least seasonal cycles Planning for all the named enterprises depended as they still do of course on the ability to predict with some certainty this class of phenomena That ability as with most physical science is predicated on a firm basis of observational fact to establish what among the myriad of mathematical possibilities is chosen by Nature as her expression of fact **Essentials of Meteorology** C.
