**Statistics is Easy! 2nd Edition** Dennis Shasha, Manda Wilson, 2010-06-06 Statistics is the activity of inferring results about a population given a sample Historically statistics books assume an underlying distribution to the data typically the normal distribution and derive results under that assumption Unfortunately in real life one cannot normally be sure of the underlying distribution For that reason this book presents a distribution independent approach to statistics based on a simple computational counting idea called resampling This book explains the basic concepts of resampling then systematically presents the standard statistical measures along with programs in the language Python to calculate them using resampling and finally illustrates the use of the measures and programs in a case study The text uses junior high school algebra and many examples to explain the concepts The ideal reader has mastered at least elementary mathematics likes to think procedurally and is comfortable with computers

parametric tests      **Statistical Methods for Food Science** John A. Bower,2009-11-09 The recording and analysis of food data are becoming increasingly sophisticated Consequently the food scientist in industry or at study faces the task of using and understanding statistical methods Statistics is often viewed as a difficult subject and is often avoided because of its complexity and a lack of specific application to the requirements of food science This situation is changing there is now much material on multivariate applications for the more advanced reader but a case exists for a univariate approach aimed at the non statistician This book provides a source text on accessible statistical procedures for the food scientist and is aimed at professionals and students in food laboratories where analytical instrumental and sensory data are gathered and require some form of summary and analysis before interpretation It is suitable for the food analyst the sensory scientist and the product developer and others who work in food related disciplines involving consumer survey investigations will also find many sections of use There is an emphasis on a hands on approach and worked examples using computer software packages and the minimum of mathematical formulae are included The book is based on the experience and practice of a scientist engaged for many years in research and teaching of analytical and sensory food science at undergraduate and post graduate level      **Essential Statistics** Robert Gould,Colleen N.
