## **Food Process Modeling:**

*Modeling Food Processing Operations* Serafim Bakalis, Kai Knoerzer, Peter J Fryer, 2015-04-28 Computational modeling is an important tool for understanding and improving food processing and manufacturing. It is used for many different purposes including process design and process optimization. However, modeling goes beyond the process and can include applications to understand and optimize food storage and the food supply chain and to perform a life cycle analysis. *Modeling Food Processing Operations* provides a comprehensive overview of the various applications of modeling in conventional food processing. The needs of industry, current practices, and state-of-the-art technologies are examined, and case studies are provided. Part One provides an introduction to the topic with a particular focus on modeling and simulation strategies in food processing operations. Part Two reviews the modeling of various food processes involving heating and cooling. These processes include thermal inactivation, sterilization, and pasteurization, drying, baking, frying, and chilled and frozen food processing, storage, and display. Part Three examines the modeling of multiphase unit operations such as membrane separation, extrusion processes, and food digestion, and reviews models used to optimize food distribution. *Comprehensively* reviews the various applications of modeling in conventional food processing. Examines the modeling of multiphase unit operations and various food processes involving heating and cooling. Analyzes the models used to optimize food distribution.

**Mathematical Modeling of Food Processing** Mohammed M. Farid, 2010-05-21 Written by international experts from industry, research centers, and academia. *Mathematical Modeling of Food Processing* discusses the physical and mathematical analysis of transport phenomena associated with food processing. The models presented describe many of the important physical and biological transformations that occur in food during process.

**Handbook of Food Process Modeling and Statistical Quality Control** Mustafa Özilgen, 2011-03-01 Presenting mathematical prerequisites in summary tables, this book explains fundamental techniques of mathematical modeling processes essential to the food industry. The author focuses on providing an in-depth understanding of modeling techniques rather than the finer mathematical points. Topics covered include modeling of transport phenomena, kinematics, and dynamics. **Food Processing Operations Modeling** Joseph M. Irudayaraj, 2001-02-27 A comprehensive survey of thermal processing and modelling techniques in food process engineering. It combines theory and practice to solve actual problems in the food processing industry, emphasizing heat and mass transfer, fluid flow, electromagnetics, stochastic processes, and neural network analysis in food systems. There are specific case studies with over 350 numerical and computational equations and solutions.
