Statistical Methods for Food Science John A. Bower,2009-11-09 The recording and analysis of food data are becoming
increasingly sophisticated Consequently the food scientist in industry or at study faces the task of using and understanding
statistical methods Statistics is often viewed as a difficult subject and is often avoided because of its complexity and a lack of
specific application to the requirements of food science This situation is changing there is now much material on multivariate
applications for the more advanced reader but a case exists for a univariate approach aimed at the non statistician This book
provides a source text on accessible statistical procedures for the food scientist and is aimed at professionals and students in
food laboratories where analytical instrumental and sensory data are gathered and require some form of summary and
analysis before interpretation It is suitable for the food analyst the sensory scientist and the product developer and others
who work in food related disciplines involving consumer survey investigations will also find many sections of use There is an
emphasis on a hands on approach and worked examples using computer software packages and the minimum of

mathematical formulae are included The book is based on the experience and practice of a scientist engaged for many years in research and teaching of analytical and sensory food science at undergraduate and post graduate level Occupational Outlook Handbook United States. Bureau of Labor Statistics,2014 Reflects the latest employment projections P 4 of cover
