**Take Judaism, for Example** Jacob Neusner,2003-09-12 *Instance Selection and Construction for Data Mining* Huan Liu,Hiroshi Motoda,2013-03-09 The ability to analyze and understand massive data sets lags far behind the ability to gather and store the data To meet this challenge knowledge discovery and data mining KDD is growing rapidly as an emerging field However no matter how powerful computers are now or will be in the future KDD researchers and practitioners must consider how to manage ever growing data which is ironically due to the extensive use of computers and ease of data collection with computers Many different approaches have been used to address the data explosion issue such as algorithm scale up and data reduction Instance example or tuple selection pertains to methods or algorithms that select or search for a representative portion of data that can fulfill a KDD task as if the whole data is used Instance selection is directly related to data reduction and becomes increasingly important in many KDD applications due to the need for processing efficiency and or storage efficiency One of the major means of instance selection is sampling whereby a sample is selected for testing and analysis and randomness is a key element in the process Instance selection also covers methods that require search Examples can be found in density estimation finding the representative instances data points for a cluster boundary hunting finding the critical instances to form boundaries to differentiate data points of different classes and data squashing producing weighted new data with equivalent sufficient statistics Other important issues related to instance selection extend to unwanted precision focusing concept drifts noise outlier removal data smoothing etc Instance Selection and Construction for Data Mining brings researchers and practitioners together to report new developments and applications to share hard learned experiences in order to avoid similar pitfalls and to shed light on the future development of instance selection This volume serves as a comprehensive reference for graduate students practitioners and researchers in KDD **Ante-Nicene Christian Library** Sir James Donaldson,1877 **SPSS for Social Scientists** Robert Miller,Ciaran Acton,Deirdre Fullerton,John Maltby,2009-04-06 This clear student friendly text offers a step by step introduction to the use of SPSS easily the most widely used data analysis computer package in the social sciences Supported by four datasets taken from the well known British Social Attitudes Survey on the topics crime health politics and poverty it offers an eminently practical approach to its subject while still setting its explanation of statistical procedures within the wider social research context **Color Trade Journal** ,1922 **House documents** ,1884 *Factory* ,1925 Vols 24 no 3 v 34 no 3 include International industrial digest *Statistical Applications for Environmental Analysis and Risk Assessment* Joseph Ofungwu,2014-05-06 *Statistical Applications for Environmental Analysis and Risk Assessment* guides readers through real world situations and the best statistical methods used to determine the nature and extent of the problem evaluate the potential human health and ecological risks and design and implement remedial systems as necessary Featuring numerous worked examples using actual data and ready made software scripts *Statistical Applications for Environmental Analysis and Risk Assessment* also includes

Descriptions of basic statistical concepts and principles in an informal style that does not presume prior familiarity with the subject Detailed illustrations of statistical applications in the environmental and related water resources fields using real world data in the contexts that would typically be encountered by practitioners Software scripts using the high powered statistical software system R and supplemented by USEPA s ProUCL and USDOE s VSP software packages which are all freely available Coverage of frequent data sample issues such as non detects outliers skewness sustained and cyclical trend that habitually plague environmental data samples Clear demonstrations of the crucial but often overlooked role of statistics in environmental sampling design and subsequent exposure risk assessment
