## Welcome to DOS

There are many different versions and variations of DOS (MS-DOS, PC-DOS, DR-DOS, N-DOS) each with its own unique subset of rules and functions. Most of these differences are too subtle for the casual user to be concerned. Invariably, you may find your DOS activities to be somewhat less than casual and you may encounter inconsistencies of operation that can be attributed to version differences. Don't sweat it! Get to know your particular brand of DOS!

```
DOS prompt displayed by the computer  
C:\A> dir  
DOS command which you type in
```

Throughout this text examples of DOS output (what the computer shows you) and input (the commands you type in) will be displayed in the above format. The DOS prompt **c:\A>** (as well as any output returned from a command you enter) is displayed in **bold type** and the actual command that you type in is displayed in *plain text*. In addition, all commands are followed by a stroke of the [enter] key which is always *omitted* in command line examples.

You will also encounter terms highlighted and italicized. I've found that the introduction of new concepts is often complicated by the need to define special terms. To avoid the burden of concept-overload, some DOS terms have been presented as clickable hot-links to a glossary of terms (only clickable in on-line format!). If you are reading this on paper, you'll need to browse to the end pages to reference glossary terms.

## A note to MAC users

While DOS syntax and conventions may seem a bit archaic and awkward compared to the Macintosh environment, the structure of the underlying organizational systems are identical across both platforms. Typing DOS commands is replaced with mouse clicking and dragging in graphical environments such as MAC-OS, Windows and X-Windows. Drives, paths and (to some degree) naming conventions do exist on all computing platforms. So, by grasping the meaning of

```
c:\windows\system\serif.fot
```

you will easily comprehend the significance of
