Geometric Algebra Over Local Rings Bernard R. McDonald, 1976      Geometric Algebra Over Local Rings Bernard R. McDonald, 1976      **Algebraic Geometry for Associative Algebras** Freddy Van Oystaeyen, 2000-06-06 This work focuses on the association of methods from topology category and sheaf theory algebraic geometry noncommutative and homological algebras quantum groups and spaces rings of differential operation Čech and sheaf cohomology theories and dimension theories to create a blend of noncommutative algebraic geometry It offers a scheme theory that sustains the duality between algebraic geometry and commutative algebra to the noncommutative level      **Hopf Algebras in Noncommutative Geometry and Physics** Stefaan Caenepeel, Fred Van Oystaeyen, 2019-05-07 This comprehensive reference summarizes the proceedings and keynote presentations from a recent conference held in Brussels Belgium Offering 1155 display equations this volume contains original research and survey papers as well as contributions from world renowned algebraists It focuses on new results in classical Hopf algebras as well as the      **Rings and Geometry** R. Kaya, P. Plaumann, K. Strambach, 2012-12-06 When looking for applications of ring theory in geometry one first thinks of algebraic geometry which sometimes may even be interpreted as the concrete side of commutative algebra However this highly developed branch of mathematics has been dealt with in a variety of monographs so that in spite of its technical complexity it can be regarded as relatively well accessible While in the last 120 years algebraic geometry has again and again attracted concentrated interest which right now has reached a peak once more the numerous other applications of ring theory in geometry have not been assembled in a textbook and are scattered in many papers throughout the literature which makes it hard for them to emerge from the shadow of the brilliant theory of algebraic geometry It is the aim of these proceedings to give a unifying presentation of those geometrical applications of ring theory outside of algebraic geometry and to show that they offer a considerable wealth of beautiful ideas too Furthermore it becomes apparent that there are natural connections to many branches of modern mathematics e.g. to the theory of algebraic groups and of Jordan algebras and to combinatorics To make these remarks more precise we will now give a description of the contents In the first chapter an approach towards a theory of noncommutative algebraic geometry is attempted from two different points of view      The Classical Groups and K-Theory Alexander J. Hahn, O. Timothy O'Meara, 2013-03-09 It is a great satisfaction for a mathematician to witness the growth and expansion of a theory in which he has taken some part during its early years When H. Weyl coined the words classical groups foremost in his mind were their connections with invariant theory which his famous book helped to revive Although his approach in that book was deliberately algebraic his interest in these groups directly derived from his pioneering study of the special case in which the scalars are real or complex numbers where for the first time he injected Topology into Lie theory But ever since the definition of Lie groups the analogy between simple classical groups over finite fields and simple classical groups over  $\mathbb{R}$  or  $\mathbb{C}$  had been observed even if the concept of simplicity was not quite the same in both cases With the

discovery of the exceptional simple complex Lie algebras by Killing and E Cartan it was natural to look for corresponding groups over finite fields and already around 1900 this was done by Dickson for the exceptional Lie algebras  $G$  and  $E$  However a deep reason for this 2 6 parallelism was missing and it is only Chevalley who in 1955 and 1961 discovered that to each complex simple Lie algebra corresponds by a uniform process a group scheme  $f_j$  over the ring  $Z$  of integers from which for any field  $K$  could be derived a group  $f_j K$

**Generators and Relations in Groups and Geometries** A. Barlotti, E.W. Ellers, P. Plaumann, K. Strambach, 2012-12-06 Every group is represented in many ways as an epimorphic image of a free group It seems therefore futile to search for methods involving generators and relations which can be used to detect the structure of a group Nevertheless results in the indicated direction exist The clue is to ask the right question Classical geometry is a typical example in which the factorization of a motion into reflections or more generally of a collineation into central collineations supplies valuable information on the geometric and algebraic structure This mode of investigation has gained momentum since the end of last century The tradition of geometric algebraic interplay brought forward two branches of research which are documented in Parts I and II of these Proceedings Part II deals with the theory of reflection geometry which culminated in Bachmann's work where the geometric information is encoded in properties of the group of motions expressed by relations in the generating involutions This approach is the backbone of the classification of motion groups for the classical unitary and orthogonal planes The axioms in this characterization are natural and plausible They provoke the study of consequences of subsets of axioms which also yield natural geometries whose exploration is rewarding Bachmann's central axiom is the three reflection theorem showing that the number of reflections needed to express a motion is of great importance

**Octonion Planes Over Local Rings** Robert Bix, 1980 Nonassociative Algebras And Related Topics - Proceedings Of The International Symposium K Yamaguti, N Kawamoto, 1991-11-29 The rapid progress in genomics and related technologies has increased interest in genetically modified organisms GMOs This concise and highly readable book equips the reader with essential information about what genes are how they work and how they can be modified and used in biotechnology The book starts with a summary of the beginnings of life the structure and components of living organisms and an outline of genetic engineering The coverage of human genetics spans race human evolution and migration the sex chromosomes gene therapy and forensic science A separate chapter is devoted to the genetics and evolution of some of the major disease causing organisms On environmental genetics the book considers the risks of releasing agricultural GM plants as well as bioremediation and metal extraction by GM plants Applications of genetic modification in agriculture pest resistant plants herbicide resistance and improved foods are presented as part of a discussion on sustainable agriculture to emphasize the role played by GM plants in relation to chemicals analytic techniques and organic farming
