Feature Control Frame Components

Rule # 1 of GD&T: Envelope Principle

Rule #1 states that the form of a regular feature of size is controlled by its "limits of size." The actual surface of a regular feature cannot extend beyond the envelope prescribed by the feature in perfect form at MMC.

Rule #1 does not apply when:

- The independency symbol is used.
- Straightness/Flatness is applied to a feature of size.
- The part is designated as a "STOCK" size.

Rule # 2: Implied Regardless of Feature Size

Regardless of Feature Size is always implied on geometric tolerances unless otherwise specified by the **Maximum Material Condition** or **Minimum Material Condition**.

Geometry Using The Standards Gd 1:

Geometric Tolerancing Standard to Machine Design Faryar Etesami, 2024-03-13 This book is for students enrolled in undergraduate mechanical engineering or similar programs The material presented is based on nearly thirty years of class tested lecture notes for courses on the applications of geometric tolerancing for designers The book's emphasis is on fit requirements for machine components as fit assurance makes up the majority of challenging applications in tolerancing For design engineers knowing how to apply geometric tolerances has been a challenge even for engineers who have practiced geometric tolerancing for a long time The syntax and meaning of geometric tolerancing statements can be learned easily and quickly but knowing how to use them correctly is much more difficult In the Design for Fit approach the presentation starts with the geometric requirements for various kinds of fit and then presents the geometric tolerance statements necessary to achieve those fits To access study problems and other supplementary files please visit <https://web.cecs.pdx.edu/far> Springer Book Student Files Index htm
