## **Group Technology:**

*The Introduction of Group Technology* John L. Burbidge, 1975      Group Technology Inyong Ham, Katsundo Hitomi, Teruhiko Yoshida, 2012-12-06 Mass production and mass consumption so far considered virtues in a free economic society have changed. Various problems have occurred including economic stagnation, energy crisis, shortage of material resources, proliferation of pollution, lack of skilled labor, rapid changes of product design, technical innovation, and others. Moreover, individual manufacturing firms must take steps to adopt multi-product small lot sized batch type production as a type of production in order to adapt themselves to a market movement characterized by a diversified and specialty-oriented society and a short product life cycle. The number of manufacturing firms worldwide that use a type of multi-product small lot sized production is expected to increase. This is so even in the United States which has been said to be a country of mass production. Multi-product small lot sized production has been considered to be a milestone to flow type mass production which has been thought to be the most effective production system. Intensive efforts have been made to investigate mass production systems from both theoretical and practical viewpoints. Few studies have been made for multi-product small lot sized production batch type manufacturing. Considering the present business circumstances faced with various difficulties, it is strongly required to establish some theories useful for making practically effective and flexible multi-product small lot sized production systems. Several effective approaches to the batch type manufacturing systems have been developed. Group technology (GT) is one such method that has steadily obtained great interest from progressive manufacturing firms all over the world.      Group Technology Marvin F. DeVries, Susan M. Harvey, Vijay A. Tipnis, 1976 Using commonly asked questions regarding the adoption of Group Technology systems in manufacturing, an introductory overview is presented. Basic principles are explored and various aspects such as classification and coding, industrial applications, relationships to NC and CAM, management, human factors, and economics are examined. A selected bibliography containing 480 references to literature published in the years 1955-1975 is provided to aid in the location of more detailed information. Subject access is included.      Introduction to Group Technology in Manufacturing and Engineering R. C. Wilson, Robert A. Henry, 1977

Group Technology in the Engineering Industry John L. Burbidge, 1979 Good. No Highlights. No Markup. All pages are intact. Slight Shelfwear. May have the corners slightly dented. May have slight color changes. Slightly damaged spine.      Group Technology Production Methods in Manufacture Colin Crompton, Gallagher, Winston Anthony Knight, 1986      Group Technology and Cellular Manufacturing Nallan C. Suresh, John M. Kay, 2012-12-06 Group Technology and Cellular Manufacturing (GT/CM) have been widely researched areas in the past 15 years and much progress has been made in all branches of GT/CM. Resulting from this research activity has been a proliferation of techniques for part machine grouping, engineering data bases, expert system based design methods for identifying part families, new analytical and simulation tools for evaluating performance of cells, new types of cell incorporating robotics and flexible automation, team based approaches

for organizing the work force and much more however the field lacks a careful compilation of this research and its outcomes The editors of this book have commissioned leading researchers and implementers to prepare specific treatments of topics for their special areas of expertise in this broad based philosophy of manufacturing The editors have sought to be global both in coverage of topic matters and contributors Group Technology and Cellular Manufacturing addresses the needs and interests of three groups of individuals in the manufacturing field academic researchers industry practitioners and students 1 The book provides an up to date perspective incorporating the advances made in GT CM during the past 15 years As a natural extension to this research it synthesizes the latest industry practices and outcomes to guide research to greater real world relevance 2 The book makes clear the foundations of GT CM from the core elements of new developments which are aimed at reducing developmental and manufacturing lead times costs and at improving business quality and performance 3 Finally the book can be used as a textbook for graduate students in engineering and management for studying the field of Group Technology and Cellular Manufacturing
