Encyclopedia Of Aviculture:

Encyclopedia of Aviculture Glen Holland,2007 The most up to date and detailed compilation of world wide Avicultural species recorded to date Initiated as a book on African birds that feature in private avicultural and zoological collections around the globe it soon became apparent that much of the information gathered pertained to aviculture worldwide Recognized avicultural experts worldwide have contributed to make this a truly international avicultural handbook A wide variety of valuable species are held outside of managed species programs and it is essential that we maximize the breeding potential of these species to ensure they contribute to long term self sustainable populations In this book the aviculturist is provided with proven practical methods for the successful management and propagation of most of the families of birds in the world Species accounts vary from the world s largest the ostrich to the diminutive hummingbirds and waxbills and include avicultural rarities such as Congo peafowl kiwi saddle bill storks bee eaters swallows and red siskins Vital practical components for avicultural success that are universally applicable to a wide range of species such as diets compatibility with other species habitat requirements incubation and hand raising techniques are included Aviculturists today are faced with the challenge of establishing captive bred strains that are no longer reliant on replenishments from wild stock while helping to reduce the current rate of species extinctions It is my desire that this book will assist aviculturists in achieving this goal

Etges,M.A. Noor,2012-12-06 Genetic studies aimed at understanding the origin of species are dominating major scientific journals In the past decade genetic tools that were previously available only in model systems have become accessible to investigators working on nearly all species Concurrent with these technical advances has been an increase in understanding of both the importance of considering the ecological context of speciation and testing hypotheses about causes for species formation Many recent studies suggest a prominent role of sexual selection in species formation These advances have produced a need for a synthesis of what we now understand about speciation and perhaps more importantly where we should go from here In this volume several leading investigators and rising stars have contributed reviews and or novel primary research findings aimed at understanding the ultimate mystery on which Darwin named his most famous and influential book Fundamental to the origin of species is the evolution of mate choice systems This

collection of papers discusses burgeoning genetic evolutionary and ecological approaches to understanding the origins of mating discrimination and causes of premating reproductive isolation both within and between species The individual contributions span a wide spectrum of disciplines taxa and ideas some controversial This synthesis brings together several of the most recent ideas with supporting empirical data This book will be of particular interest to both undergraduate and postgraduate researchers and students and researchers in the field of evolutionary biology genetics and animal behaviour
