*Function Field Arithmetic* Dinesh S. Thakur, 2004 This book provides an exposition of function field arithmetic with emphasis on recent developments concerning Drinfeld modules the arithmetic of special values of transcendental functions such as zeta and gamma functions and their interpolations diophantine approximation and related interesting open problems While it covers many topics treated in *Basic Structures of Function Field Arithmetic* by David Goss it complements that book with the inclusion of recent developments as well as the treatment of new topics such as diophantine approximation hypergeometric functions modular forms transcendence automata and solitons There is also new work on multizeta values and log algebraicity The author has included numerous worked out examples Many open problems which can serve as good thesis problems are discussed

**Basic Structures of Function Field Arithmetic** David Goss, 1997-11-18 From the reviews The book is a thorough and very readable introduction to the arithmetic of function fields of one variable over a finite field by an author who has made fundamental contributions to the field It serves as a definitive reference volume as well as offering graduate students with a solid understanding of algebraic number theory the opportunity to quickly reach the frontiers of knowledge in an important area of mathematics The arithmetic of function fields is a universe filled with beautiful surprises in which familiar objects from classical number theory reappear in new guises and in which entirely new objects play important roles Goss clear exposition and lively style make this book an excellent introduction to this fascinating field MR 97i 11062

[Number Theory in Function Fields](#) Michael Rosen, 2002-01-08 Early in the development of number theory it was noticed that the ring of integers has many properties in common with the ring of polynomials over a finite field The first part of this book illustrates this relationship by presenting analogues of various theorems The later chapters probe the analogy between global function fields and algebraic number fields Topics include the ABC conjecture

Brumer Stark conjecture and Drinfeld modules      Field Arithmetic Michael D. Fried, Moshe Jarden, 2023-06-12 This book uses algebraic tools to study the elementary properties of classes of fields and related algorithmic problems The first part covers foundational material on infinite Galois theory profinite groups algebraic function fields in one variable and plane curves It provides complete and elementary proofs of the Chebotarev density theorem and the Riemann hypothesis for function fields together with material on ultraproducts decision procedures the elementary theory of algebraically closed fields undecidability and nonstandard model theory including a nonstandard proof of Hilbert's irreducibility theorem The focus then turns to the study of pseudo algebraically closed PAC fields related structures and associated decidability and undecidability results PAC fields fields  $K$  with the property that every absolutely irreducible variety over  $K$  has a rational point first arose in the elementary theory of finite fields and have deep connections with number theory This fourth edition substantially extends updates and clarifies the previous editions of this celebrated book and includes a new chapter on Hilbertian subfields of Galois extensions Almost every chapter concludes with a set of exercises and bibliographical notes An appendix presents a selection of open research problems Drawing from a wide literature at the interface of logic and arithmetic this detailed and self contained text can serve both as a textbook for graduate courses and as an invaluable reference for seasoned researchers

**Arithmetic Geometry over Global Function Fields** Gebhard Böckle, David Burns, David Goss, Dinesh Thakur, Fabien Trihan, Douglas Ulmer, 2014-11-13 This volume collects the texts of five courses given in the Arithmetic Geometry Research Programme 2009 2010 at the CRM Barcelona All of them deal with characteristic  $p$  global fields the common theme around which they are centered is the arithmetic of  $L$  functions and other special functions investigated in various aspects Three courses examine some of the most important recent ideas in the positive characteristic theory discovered by Goss a field in tumultuous development which is seeing a number of spectacular advances they cover respectively crystals over function fields with a number of applications to  $L$  functions of  $t$  motives gamma and zeta functions in characteristic  $p$  and the binomial theorem The other two are focused on topics closer to the classical theory of abelian varieties over number fields they give respectively a thorough introduction to the arithmetic of Jacobians over function fields including the current status of the BSD conjecture and its geometric analogues and the construction of Mordell Weil groups

of high rank and a state of the art survey of Geometric Iwasawa Theory explaining the recent proofs of various versions of the Main Conjecture in the commutative and non commutative settings *Topics in the Theory of Algebraic Function Fields* Gabriel Daniel Villa Salvador, 2007-10-10 The fields of algebraic functions of one variable appear in several areas of mathematics complex analysis algebraic geometry and number theory This text adopts the latter perspective by applying an arithmetic algebraic viewpoint to the study of function fields as part of the algebraic theory of numbers The examination explains both the similarities and fundamental differences between function fields and number fields including many exercises and examples to enhance understanding and motivate further study The only prerequisites are a basic knowledge of field theory complex analysis and some commutative algebra The book can serve as a text for a graduate course in number theory or an advanced graduate topics course Alternatively chapters 1-4 can serve as the base of an introductory undergraduate course for mathematics majors while chapters 5-9 can support a second course for advanced undergraduates Researchers interested in number theory field theory and their interactions will also find the work an excellent reference

**Algebraic Function Fields and Codes** Henning Stichtenoth, 2009-02-11 This book links two subjects algebraic geometry and coding theory It uses a novel approach based on the theory of algebraic function fields Coverage includes the Riemann-Roch theorem zeta functions and Hasse-Weil's theorem as well as Goppa's algebraic geometric codes and other traditional codes It will be useful to researchers in algebraic geometry and coding theory and computer scientists and engineers in information transmission Number Fields and Function Fields - Two Parallel Worlds Gerard van der

Geer, B.J.J Moonen, René Schoof, 2005-09-14 Invited articles by leading researchers explore various aspects of the parallel worlds of function fields and number fields Topics range from Arakelov geometry the search for a theory of varieties over the field with one element via Eisenstein series to Drinfeld modules and  $t$ -motives Aimed at graduate students mathematicians and researchers interested in geometry and arithmetic and their connections Number Fields and Function Fields - Two Parallel Worlds Gerard van der Geer, B.J.J Moonen, René Schoof, 2008-11-01 Invited articles by leading researchers explore various aspects of the parallel worlds of function fields and number fields Topics range from Arakelov geometry the search for a theory of varieties over the field with one element via Eisenstein series to Drinfeld modules and  $t$ -motives Aimed at graduate students mathematicians and researchers interested in geometry and arithmetic and their connections **Analytic**

**Arithmetic of Algebraic Function Fields** John Knopfmacher, 1979 Field Arithmetic Michael D. Fried, Moshe Jarden, 1986 Field Arithmetic explores Diophantine fields through their absolute Galois groups This largely self-contained treatment starts with techniques from algebraic geometry number theory and profinite groups Graduate students can effectively learn generalizations of finite field ideas We use Haar measure on the absolute Galois group to replace counting arguments New Chebotarev density variants interpret diophantine properties Here we have the only complete treatment of Galois stratifications used by Denef and Loeser et al to study Chow motives of Diophantine statements Progress from the first

edition starts by characterizing the finite field like P pseudo Algebraically Closed fields We once believed PAC fields were rare Now we know they include valuable Galois extensions of the rationals that present its absolute Galois group through known groups PAC fields have projective absolute Galois group Those that are Hilbertian are characterized by this group being pro free These last decade results are tools for studying fields by their relation to those with projective absolute group There are still mysterious problems to guide a new generation Is the solvable closure of the rationals PAC and do projective Hilbertian fields have pro free absolute Galois group includes Shafarevich's conjecture [Arithmetic of Finite Fields](#) Charles Small, 1991-04-24 Text for a one semester course at the advanced undergraduate beginning graduate level or reference for algebraists and mathematicians interested in algebra algebraic geometry and number theory examines counting or estimating numbers of solutions of equations in finite fields concentrating on top [Nonstandard Arithmetic of Function Fields Over H-Convex Subfields of  \$\mathbb{Q}\$](#) , 1991 [Cohomological Theory of Crystals Over Function Fields](#) Gebhard Böckle, Richard Pink, 2009 This book develops a new cohomological theory for schemes in positive characteristic  $p$  and it applies this theory to give a purely algebraic proof of a conjecture of Goss on the rationality of certain  $L$  functions arising in the arithmetic of function fields These  $L$  functions are power series over a certain ring  $A$  associated to any family of Drinfeld  $A$  modules or more generally of  $A$  motives on a variety of finite type over the finite field  $\mathbb{F}_p$  By analogy to the Weil conjecture Goss conjectured that these  $L$  functions are in fact rational functions In 1996 Taguchi and Wan gave a first proof of Goss's conjecture by analytic methods à la Dwork The present text introduces  $A$  crystals which can be viewed as generalizations of families of  $A$  motives and studies their cohomology While  $A$  crystals are defined in terms of coherent sheaves together with a Frobenius map in many ways they actually behave like constructible étale sheaves A central result is a Lefschetz trace formula for  $L$  functions of  $A$  crystals from which the rationality of these  $L$  functions is immediate Beyond its application to Goss's  $L$  functions the theory of  $A$  crystals is closely related to the work of Emerton and Kisin on unit root  $F$  crystals and it is essential in an Eichler Shimura type isomorphism for Drinfeld modular forms as constructed by the first author The book is intended for researchers and advanced graduate students interested in the arithmetic of function fields and or cohomology theories for varieties in positive characteristic It assumes a good working knowledge in algebraic geometry as well as familiarity with homological algebra and derived categories as provided by standard textbooks Beyond that the presentation is largely self contained [Arithmetic of Finite Fields](#) Çetin Kaya Koç, Sihem Mesnager, Erkan Savaş, 2015-02-21 This book constitutes the refereed proceedings of the 5th International Workshop on the Arithmetic of Finite Fields WAIFI 2014 held in Gebze Turkey in September 2014 The 9 revised full papers and 43 invited talks presented were carefully reviewed and selected from 27 submissions This workshop is a forum of mathematicians computer scientists engineers and physicists performing research on finite field arithmetic interested in communicating the advances in the theory applications and implementations of finite fields The workshop will help to bridge the gap between the mathematical

theory of finite fields and their hardware software implementations and technical applications      **Drinfeld Modules** Mihran Papikian, 2023-03-31 This textbook offers an introduction to the theory of Drinfeld modules mathematical objects that are fundamental to modern number theory After the first two chapters conveniently recalling prerequisites from abstract algebra and non Archimedean analysis Chapter 3 introduces Drinfeld modules and the key notions of isogenies and torsion points Over the next four chapters Drinfeld modules are studied in settings of various fields of arithmetic importance culminating in the case of global fields Throughout numerous number theoretic applications are discussed and the analogies between classical and function field arithmetic are emphasized Drinfeld Modules guides readers from the basics to research topics in function field arithmetic assuming only familiarity with graduate level abstract algebra as prerequisite With exercises of varying difficulty included in each section the book is designed to be used as the primary textbook for a graduate course on the topic and may also provide a supplementary reference for courses in algebraic number theory elliptic curves and related fields Furthermore researchers in algebra and number theory will appreciate it as a self contained reference on the topic
