Human-Computer Interaction Ping Zhang, Jane Carey, Dov Te'eni, 2013 This book is about developing interactive information systems that support people at work or when conducting business Specifically it emphasizes the need to study and practice the development of HCI for real world organizations in given contexts Developing an effective information system means achieving a good fit among the users In order to do this designers need to have a good understanding of important factors that come into play Designers need to understand why and how people interact with computers in order to accomplish their work and personal goals what are the physical cognitive affective and behavioral constraints on the users side what pleases or annoys them what makes human computer interaction a satisfying experience or an effective This knowledge is the foundation of human computer interaction HCI development

Socializing the Human-computer Environment Jerry J. Vaske, Charles E. Grantham, 1990 In this text the authors call attention to the social consequences of human computer interaction and begin the process of developing a theoretical framework that recognizes the interdisciplinary nature of the interactions that occur between people and machines Theories found in social psychology sociology and anthropology are used to illustrate how these disciplines can facilitate our understanding of the social processes underlying human computer interactions and how this understanding benefits the design development and implementation of computer systems This volume represents a blend of theory research and application The theory chapters offer alternative perspectives on issues that should be considered by system designers and managers Each of the chapters follow a similar format Variables commonly used by a given discipline are examined first followed by a discussion of the theoretical perspectives relevant to that social science Each major section concludes with a series of questions researchers can consider when designing new projects and managers can use when implementing approaches to studying the impacts computers have on people
