

OPERANT CONDITIONING

Operant conditioning explains how people and animals develop learned responses through the repetition of reinforcements and punishments.

KEY CONCEPTS

Positive reinforcement - when something pleasant or rewarding is given after a specific behavior.

Negative reinforcement - an attempt to increase a specific behavior by removing something that is negative when the behavior is done.

Punishment - applying something aversive after a specific behavior to decrease the frequency of that behavior.

EXAMPLE IN EDUCATION

Kindergarten teachers utilize the principles of operant conditioning on a daily basis.

When a child is well-behaved, the teacher might put a gold star or smiley face sticker by their name on a poster.

The teacher has just used positive reinforcement to reward a behavior they want to see more of. Rewarding behavior increases the chance of it recurring.
