Suzuki,2012-02-16 In her book Dr Taneko Suzuki shows us how a modern fish processing industry using complex technology has evolved from the traditional methods of fish preparation long in use in Japan With only a small proportion of arable land for growing food the Japanese have always looked to the sea and fortunately have been blessed with a rich and varied aquatic fauna Over the ages the Japanese have learnt not only how to make maximum nutritional use of their marine resources but also how to present them as attractive food items As a result the visual impact and organoleptic properties of the vast array of fishery products make Japanese cuisine one of the most exciting in the world In addition the Japanese have developed a strong tradition of quality whether for the small quantities of fish used in the past to add interest to a monotonous rice diet or for the larger quantities of raw and cooked products required by today's affluent society The growth of the Japanese fishing industry paralleled the phenomenal industrial developments of the post war years It continued until Japanese fleets were in action all over the world trying to satisfy the demands of a booming economy for high quality fishery products All the time technology was being developed to make use of unusual species as raw material for traditional products *Fish Processing Technology* T. Majumder,Amjad K. Balange,2023-02-01 Fisheries in India and elsewhere are a very important economic activity with total fish production

growing each year in response to increasing demand from consumers. With this growth, it is important for developing countries to take advantage of new advances in fish preservation, processing, and packaging technologies. This new volume, *Advances in Fish Processing Technologies: Preservation, Waste Utilization, and Safety Assurance*, covers advances in fish processing technology, green technologies for extracting nutraceuticals, the role of endogenous enzymes in the quality of fish, shellfish, and their products, disruptive technologies, and restructured product-based technologies. The chapters introduce improved techniques that are available for handling, transportation, product development, packaging, preservation, and storage of fish, with the aim to present safe and convenient products to consumers. The volume also addresses technology to reduce undesirable changes in fish due to processing. The technologies discussed include high pressure processing, irradiation, pulsed light technology, pulsed electric field, microwave processing, application of radio frequency, ultrasound, and more. Topics such as innovative methods for utilization of fish waste are discussed, as well as quality and safety aspects of fish and fish products, are covered with reference to antimicrobial resistance, bacteria, and new developments in safety and quality management systems of fish and fish products. This volume provides a wealth of information for graduate and postgraduate students of fisheries and food science. It will also be useful for food science professionals.
