Fronts Interfaces And Patterns:

Patterns and Interfaces in Dissipative Dynamics Len Pismen, 2023-06-12 Spontaneous pattern formation in nonlinear dissipative systems far from equilibrium occurs in a variety of settings in nature and technology and has applications ranging from nonlinear optics through solid and fluid mechanics physical chemistry and chemical engineering to biology This book explores the forefront of current research describing in depth the analytical methods that elucidate the complex evolution of nonlinear dissipative systems

Patterns and Interfaces in Dissipative Dynamics L.M. Pismen, 2006-07-07 Spontaneous pattern formation in nonlinear dissipative systems far from equilibrium is a paradigmatic case of emergent behaviour associated with complex systems It is encountered in a great variety of settings both in nature and technology and has numerous applications ranging from nonlinear optics through solid and fluid mechanics physical chemistry and chemical engineering to biology Nature creates its variety of forms through spontaneous pattern formation and self assembly and this strategy is likely to be imitated by future biomorphic technologies This book is a first hand account by one of the leading players in this field which gives in depth descriptions of analytical methods elucidating the complex evolution of nonlinear dissipative systems and brings the reader to the forefront of current research The introductory chapter on the theory of dynamical systems is written with a view to applications of its powerful methods to spatial and spatio temporal patterns It is followed by two chapters treating moving interfaces based largely on reaction diffusion and phase separating systems The following two chapters on amplitude equations for patterns and waves describe universal phenomena generated by representative equations which can be derived for a variety of non equilibrium systems originating in fluid mechanics physical chemistry or nonlinear optics This book addresses graduate students and non specialists from the many related areas of applied mathematics physical chemistry chemical engineering and biology as well as the seasoned scientist in search of a modern source of reference

Studies of Intensified Small-scale Processes for Liquid-Liquid Separations in Spent Nuclear Fuel Reprocessing Dimitrios Tsaoulidis,2015-09-09 The present work focuses on the development of intensified small scale extraction units for spent nuclear fuel reprocessing using advanced process engineering with combined experimental and modelling methodologies It discusses a number of novel elements such as the intensification of spent fuel reprocessing and the use of ionic liquids as green alternatives to organic solvents The use of ionic liquids in two phase liquid liquid separation is new to the Multiphase Flow community and has proved to be challenging especially in small channels because of the surface and interfacial properties involved which are very different to those of common organic solvents Numerical studies have been also performed to couple the hydrodynamics at small scale with the mass transfer The numerical results taken together with scale up studies are used to evaluate the applicability of the small scale units in reprocessing large volumes of nuclear waste **Referativnyi zhurnal** ,1986 **Reaction-diffusion Equations and Their Applications to Biology** N.
