

Guidelines for human embryonic stem cell research

Jonathan D Moreno & Richard O Hynes

Responding to a lack of US government leadership on the conduct of human embryonic stem cell research, a National Academies panel has proposed the creation of new institutional oversight committees.

The limited federal role in funding and monitoring research involving human embryonic stem (hES) cells has raised concerns among the scientific community that the field is progressing without adequate guidance. In response, the US National Academies set up a committee, which we cochaired, to develop guidelines for the appropriate conduct of hES cell research. The committee's report, released in April 2005, includes both substantive standards for research and procedures for oversight. It divides hES cell research into three categories: research that does not require review beyond current regulatory mandates, research that requires more extensive review and research that is not permissible at this time. We urge the scientific community and its supporting institutions to adopt these voluntary guidelines in order to establish a common framework for this important field.

The need for guidelines

As the study of hES cells accelerates worldwide, federal funding for this research area in the United States has been severely limited by ethical controversy. As a consequence, the normal leadership role of the US National Institutes of Health in supporting health-related research and providing the oversight that comes with federal funding has been absent. Investigation of hES cells is being funded increasingly by individual states and by private foundations

in the absence of universal rules for conduct of the research. In most states, there are no regulations; in some, the research is illegal, either in whole or in part; and, in others, legislation has explicitly legalized research efforts and even provided public funding. Thus, the research is proceeding actively but under a confusing patchwork of regulations. This situation is particularly inappropriate for an area of investigation that, although offering great promise, raises ethical issues.

In response to scientists' concerns about the lack of federal oversight, a committee of the National Research Council and the Institute of Medicine of the National Academies undertook to formulate guidelines for the appropriate

conduct of hES cell research. The guidelines were released April 26, 2005, after eight months of deliberations, many meetings and a two-day public workshop (<http://www.nas.edu/>).

The committee, composed of scientists, physicians, lawyers, ethicists, a social scientist and a patient advocate, actively sought to solicit a broad range of opinions from the international scientific and lay public through public notices. Among those from whom we received comments were stem cell biologists, bioethicists, members of the President's Council on Bioethics, officials of industry and patient advocacy groups, and representatives of the US Food and Drug Administration and the federal Office for Human Research Protections.
