## **Economic Modelling Under The Applied General Equilibrium Approach:**

Economic Modelling Under the Applied General Equilibrium Approach Amedeo Fossati, 1996 Provides valuable insights into the contemporary state of the art of investigating policy issues **Applied General Equilibrium Modelling** Henk Don, Theo C.M.J. van de Klundert, Jarig van Sinderen, 2013-04-17 Over the last decade or so applied general equilibrium models have rapidly become a major tool for policy advice on issues regarding allocation and efficiency most notably taxes and tariffs This reflects the power of the general equilibrium approach to allocative questions and the capability of today's applied models to come up with realistic answers However it by no means implies that the theoretical practical and empirical problems faced by researchers in applied modelling have all been solved in a satisfactory way Rather a promising field of research has been opened up inviting theorists and practitioners to further explore and exploit its potential The state of the art in applied general equilibrium modelling is reflected in this volume The introductory Chapter Part I evaluates the use of economic modelling to address policy questions and discusses the advantages and disadvantages of applied general equilibrium models Three substantive issues are dealt with in Chapters 2 8 Tax Reform and Capital Part II Intertemporal Aspects and Expectations Part III and Taxes and the Labour Market Part IV While all parts contain results relevant for economic policy it is clear that theory and applications for these areas are in different stages of development We hope that this book will bring inspiration insight and information to researchers students and policy advisors Economic Modelling in the OECD Countries Homa Motamen-Scobie, 2012-12-06 among the 159 member countries of the United Nations Organization which are treated as country units while smaller countries are grouped together in regions The number of equations used is approximately 13 700 while the number of software steps for computation is approximately 100000 Computation including tabulation can nevertheless be performed very rapidly and only about 20 minutes is required to make forecasts from the present up to the year 2000 The FUGI model is at present being used by the Projections and Perspectives Studies Branch Department of International Economic and Social Affairs of the United Nations for simulations of United Nations medium and long term international development strategies while the Project LINK model is being used for short term forecasts Onishi 1985 Stimulated by our latest joint research with the United Nations University on a global early warning system for displaced persons we have felt the need for our FUGI model to go beyond its present capacities centred on an economic model in the rather traditional restricted sense of the term and to develop into a model that can in the future analyse global problematiques or global complexes of symptoms and complicated questions including various types of environmental problems and the sorts of displaced persons issues to which we are now directing our attention We are thus expanding the scope of our fifth generation FUGI model presently under development to deal with such issues **Economic Multisectoral Modelling Between Past and Future** Rossella Bardazzi, 2013 This book is a tribute to the work of Maurizio Grassini econometrician and model builder The selection of his works in the first part of the volume is mainly devoted to

research issues of multisectoral modelling In fact M Grassini has dedicated a large part of his professional life to building and developing the INTIMO model for the Italian economy within the INFORUM research project The book does not aim to be a celebration of the past but takes a look at the future of the multisectoral modelling which M Grassini has contributed so much to In the second part of the book colleagues and friends who have encountered M Grassini in the professional sphere on matters of quantitative economic analysis or still working with him on interindustry models have given their contribution to look at the future prospects of a research field firmly based on the experience of what has been done so far Policy Simulations in the European Union Amedeo Fossati, John Hutton, 1998-02-19 The papers in this much needed collection employ Applied General Equilibrium methodology to address a wide variety of concerns within the European Union Contributors examine five main policy areas international market integration policy simulations with alternative treatments of factor markets policies for carbon dioxide abatement competitiveness and convergence VAT and income tax reform

**Integrated Macro-Micro-Modelling Under Rational Expectations** Michael Malakellis, 2012-12-06 This monograph is concerned with the formulation and implementation of ORANI INT an intertemporal Computable General Equilibrium CGE model of the Australian economy The aim is to bring together in a balanced approach theory and data for the purpose of developing a practical state of the art tool for policy analysis The modelling approach adopted is motivated by the recent trend in economy wide modelling to combine the respective strengths of traditional CGE models and modern macroeconomic models Traditional CGE models typically provide a disaggregate representation of the economy at a single point in time Such models are useful for analysing issues involving the allocation of resources among the various agents identified at a particular point in time Modern macroeconomic models on the other hand usually provide an aggregate representation of the economy over many points in time Such models are useful for analysing issues involving the allocation of resources across time A model that combines the strengths of static CGE models and modern macro dynamic models is amenable to addressing a wide range of policy issues To demonstrate this point ORANI INT is used to analyse tariff reform *Spatial Economic Modelling of Megathrust Earthquake in Japan* Suminori Tokunaga, Budy P. Resosudarmo, 2017-12-19 This book presents an evaluation of the impacts of megathrust earthquakes and tsunamis on regional economies and subsequent reconstruction as well as regional revitalization by the spatial economic model and dynamic macro and regional computable general equilibrium CGE models The cases examined are the Great East Japan Earthquake and the Indian Ocean Tsunami The study constructs three models of these megathrust earthquakes and the associated tsunami In the first model the regional CGE model is proposed with a database comprising the two regional social accounting matrix for 2005 between the region comprising four disaster affected prefectures of Japan and the non disaster region For the recursive dynamic regional CGE model the model that expanded and improved the dynamic two regional CGE model to reflect the incomplete employment conditions and the aging society is used to analyze the impacts of an earthquake and the construction of

industrial clusters In the second model the interregional input output model is proposed in order to analyze the impacts of the earthquake and rapid population decline and construction of a biogas electricity power plant In the third model a new economic geography NEG model is proposed consisting of the 47 prefectures of Japan in order to investigate the impacts of the Great East Japan and Nankai megathrust earthquakes and the associated tsunami and to consider how they change the regional economies of Japan Using these three models the impacts of megathrust earthquakes and tsunamis on regional economies and reconstruction and on regional revitalization are evaluated

**Dynamic Modelling and Control of National Economies 1989** N.M. Christodoulakis, 2014-06-28 The Symposium aimed at analysing and solving the various problems of representation and analysis of decision making in economic systems starting from the level of the individual firm and ending up with the complexities of international policy coordination The papers are grouped into subject areas such as game theory control methods international policy coordination and the applications of artificial intelligence and experts systems as a framework in economic modelling and control The Symposium therefore provides a wide range of important information for those involved or interested in the planning of company and national economics

**Handbook of Development Economics** Hollis Burnley Chenery, J. Behrman, T.N. Srinivasan, 1988 Handbooks of development economics edit Chenery v 1 *Notes and Problems in Applied General Equilibrium Economics* K.R. Pearson, B.R. Parmenter, A.A. Powell, P.J. Wilcoxon, P.B. Dixon, 2014-06-28 General equilibrium refers to an analytical approach which looks at the economy as a complete system of inter dependent components industries households investors governments importers and exporters Applied means that the primary interest is in systems that can be used to provide quantitative analysis of economic policy problems in particular countries Reflecting the authors belief in the models as vehicles for practical policy analysis a considerable amount of material on data and solution techniques as well as on theoretical structures has been included The sequence of chapters follows what is seen as the historical development of the subject The book is directed at graduate students and professional economists who may have an interest in constructing or applying general equilibrium models The exercises and readings in the book provide a comprehensive introduction to applied general equilibrium modeling To enable the reader to acquire hands on experience with computer implementations of the models which are described in the book a companion set of diskettes is available

Applied Political Economic Modelling Paul S.A. Renaud, 1989-10-18 The subject and purpose of this book is to make a contribution to the development and application of political economic models The point of departure is the public choice literature and in particular the interest function approach to government behaviour The book gives a critical and up to date review of the existing approaches in the public choice literature Various approaches are theoretically and empirically elaborated and statistically tested using data for the Netherlands Moreover new models are

constructed which try to explain governmental decision making with respect to government expenditure and transfer payments The models are empirically applied to the Netherlands The book analyzes in detail the organization of governmental decision making and studies the implications of this structure for economic policy Applied General Equilibrium Manuel Alejandro Cardenete, Ana-Isabel Guerra, Ferran Sancho, 2017-08-02 This advanced textbook provides a straightforward but comprehensive introduction to applied general equilibrium modeling General equilibrium is the backbone of modern economic analysis which is why generation after generation of economics students have been introduced to it As an analytical tool general equilibrium can provide one of the most complete views of a given economy as it incorporates all economic agents households firms government and the foreign sector in an integrated way that explicitly reveals the interplay of economic forces supply and demand and the balancing role of prices Applied general equilibrium goes one step further in modeling since it entails the integration of microeconomic theory data handling and computing This integration is essential for successful empirical modeling but also involves various abilities that are not found in standard books This book fills the gap providing advanced students with the required tools from the construction of consistent and applicable general equilibrium models to the interpretation of the results that ensue from the adoption of policies This second edition expands the range of topics covered including indispensable general equilibrium theory step by step model design incremental model extensions a wealth of sample computer code procedures for constructing economic databases database adjustments and database updating algorithms numerical model calibration policy strategies and their trade offs and welfare effects and a discussion of empirical policy examples Journal of Applied Social Science Studies ,2008 **Frontiers in Applied General Equilibrium Modeling** Timothy J. Kehoe, T. N. Srinivasan, John Whalley, 2005-01-17 This 2005 volume brings together twelve papers by many of the most prominent applied general equilibrium modelers honoring Herbert Scarf the father of equilibrium computation in economics It deals with developments in applied general equilibrium a field which has broadened greatly since the 1980s The contributors discuss some traditional as well as some modern topics in the field including non convexities in economy wide models tax policy developmental modeling and energy modeling The book also covers a range of distinct approaches conceptual issues and computational algorithms such as calibration and areas of application such as macroeconomics of real business cycles and finance An introductory chapter written by the editors maps out issues and scenarios for the future evolution of applied general equilibrium Applied Simulation and Modelling, ASM '86 International Association of Science and Technology for Development, 1986 **The Energy Journal** ,1993 *Annali di statistica* ,1995 *OECD Economic Studies* ,1989
