Algorithmic Thinking Daniel Zingaro, 2020-12-15 A hands on problem based introduction to building algorithms and data structures to solve problems with a computer Algorithmic Thinking will teach you how to solve challenging programming problems and design your own algorithms Daniel Zingaro a master teacher draws his examples from world class programming competitions like USACO and IOI You ll learn how to classify problems choose data structures and identify appropriate algorithms You ll also learn how your choice of data structure whether a hash table heap or tree can affect runtime and speed up your algorithms and how to adopt powerful strategies like recursion dynamic programming and binary search to solve challenging problems Line by line breakdowns of the code will teach you how to use algorithms and data structures like The breadth first search algorithm to find the optimal way to play a board game or find the best way to translate a book Dijkstra s algorithm to determine how many mice can exit a maze or the number of fastest routes between two locations The union find data structure to answer questions about connections in a social network or determine who are friends or enemies The heap data structure to determine the amount of money given away in a promotion The hash table data structure to determine whether snowflakes are unique or identify compound words in a dictionary NOTE Each problem in this book is available on a programming judge website You ll find the site s URL and problem ID in the description What s better than a free correctness check
